Computer/ Internet and Pornography Definitions

The following are definitions and terms related to computers, the Internet and this investigation:

Internet Protocol (IP) Number:

IP Numbers are a unique set of numbers consisting of 4 parts separated by dots, e.g., 165.113.245.2. This is used to identify devices on the Internet/Network. Every machine that is on the Internet has a unique IP number which can be used to track the location of a device. IP numbers are globally unique numeric identifiers that computers use to identify hosts and networks connected to the Internet.

American Registry of Internet Numbers (ARIN):

ARIN is a nonprofit organization that manages the IP Number resources throughout the Internet for North America, a portion of the Caribbean and sub-equatorial Africa. This free resource is used to determine the Internet Service Provider (ISP) for a specific IP number. Other registry organizations are responsible for registering and maintaining domain names, which are commonly, used unique identifiers that are translated into numeric addresses (IP numbers). IP numbers are globally unique, numeric identifiers that computers use to identify hosts and networks connected to the Internet. A free public database lookup is available from their website located at <http://www.arin.net>. This database can be searched to determine who an I.P. address is assigned. This is usually a large business or an Internet Service Provider (ISP).

Child Pornography:

"Child Pornography" - any book, magazine, pamphlet, slide, photograph, film, videotape, computer depiction or other material depicting a child under the age of 18 engaged in a prohibited sexual act or in the simulation of such act.

Prohibited Sexual Act:

Prohibited sexual act (as used in section 6312 of the PA Crimes Code) - sexual intercourse, masturbation, sadism, masochism, bestiality, fellatio, cunnilingus, lewd exhibition of the genitals or nudity if such nudity is depicted for the purpose of sexual stimulation or gratification of any person who might view that depiction.

Secure Hash Algorithm - 1 (SHA-1):

SHA-1 is a mathematical algorithm that allows for the fingerprinting of files. Software utilities are used to "hash" a file to determine a unique identifying SHA1 value. This "fingerprint" is a fixed-length unique identifier for that file that does not change from system to system unless the file is modified. The SHA1 hash is the current Federal Information Processing and Digital Signature Algorithm. The SHA1 is called secure because it is computationally infeasible for two files with different content to have the same SHA1 hash value thus enabling investigators to positively identify contraband files being offered for download.
