KYOCERA AVX is a leading supplier of active and passive antenna solutions for industrial, commercial, automotive, and medical applications with prototyping facilities in the United States, France & Taiwan, China and manufacturing sites in South Korea, Vietnam, and China. KYOCERA AVX antennas offer a competitive advantage in the market by providing enhanced throughput speed, spectral efficiency, reliability and performance.

Our ever-evolving portfolio consists of antennas, antenna technologies, RF chipsets, antenna systems, and measurement systems for both active and passive antenna solutions.

### KYOCERA AVX STATE-OF-THE-ART MANUFACTURING CAPABILITIES

- Stamping
- LTCC
- Plastic injection molding
- Heat-staking
- Plasma treatment
- FR4 and Composite material
- Acoustic module design and testing (THD, SPL)
- Flexible printed circuit
- PAD printing, painting
- Laser Direct Structuring (LDS)
- Cable assemblies
- RF testing
- HTC ceramic
- Chemical plating
- Wired antenna forming

## ANTENNA APPLICATIONS

KYOCERA AVX antennas are designed for a wide array of applications. Whether the antenna is embedded, internal, external, or outdoor, KYOCERA AVX uses its worldwide manufacturing capabilities to provide state of the art antenna technology. The KYOCERA AVX Antenna Design team helps customers select the best antenna for the application.

## ANTENNA DEVELOPMENT PROCESS

### 1 | CONSULTATION

- Definition of critical electrical/mechanical performance requirements
- Feasibility study and CAD/board layout review
- Recommendations on antenna technology, placement and orientation

### 2 | DESIGN

- Antenna Selection: Standard vs. Custom, Active vs. Passive, etc.
- Reference design integration experience
- Mechanical engineering optimization
- RF simulations
- Design for industrialization

### 3 | PROTOTYPING

- Prototyping tools (3D printers, LPKF machines, fully equipped workshops)
- Mock-ups to validate technical offering
- Samples

### 4 | TEST & OPTIMIZATION

- Pre-Certification testing reports for FCC, PTCRB, EMI, Noise issues
- Available tests: VNA & Anechoic Chamber Testing, Octobox Chamber Measurements, Device Simulation, Test House Measurements, Benchmark Testing & Competitive Analysis

### 5 | MANUFACTURING

- Quality documentation available
- 4 antenna manufacturing locations
- More than 2.5Bn antennas in the market

# SELECTION PROCESS

## STANDARD VS. CUSTOM ANTENNAS

Connectivity is key in today's world and devices in the market require strong signal strength to allow for peak performance. Integrating an antenna is not trivial, whether it is an off-the-shelf product or a highly customized solution, and should not be an afterthought.

The KYOCERA AVX Antenna Design Team strongly recommends considering the antenna design and/or the antenna integration process as early as possible, ideally during the product design and the radio module selection. A perfect match between the radio and the antenna will ensure all wireless connectivity needs are met.

Working with the KYOCERA AVX Antenna Design Team is simple and straight forward. The team will ask relevant questions to determine if a standard, off-the-shelf antenna or a customized antenna is the best technology solution.

If a standard antenna is necessary, please refer to the links below for integration documentation:

- Datasheets: <http://www.kyocera avx.com/antennas>
- Application Notes, DXF files & ME-FIT (3D CAD) (*found under specific individual antenna product pages*)
- Stock check: [www.kyocera avx.com/resources/distributor-stock-check](http://www.kyocera avx.com/resources/distributor-stock-check)

**If a customized passive or active antenna is necessary,** the KYOCERA AVX Antenna Design Team will contact and work with the key partners (distribution, sales, design, FAE, etc.) to fully understand the overall challenge and offer the best technology solution.

For questions and additional information about our solutions, please contact the KYOCERA AVX Antenna Design Team.

### IS THIS A NEW DEVICE OR AN EXISTING DEVICE TO BE IMPROVED?

Are the mechanics frozen or flexible? Is the antenna location, shape and interconnect solution frozen? Standard antennas have a quicker time to market compared to custom designs making it easier to integrate them into projects, while minimizing redesign cycle time and eliminating design fees. A custom design can be developed to match required electrical and mechanical specifications.

### WHAT TYPE OF ANTENNA IS REQUIRED?

- Embedded (on board the device PCB)
- Internal (inside device, but not surface mounted)
- External (outside device)
- Outdoor (IP67)

### WHAT ARE THE MAIN CHALLENGES FOR THIS PROJECT?

KYOCERA AVX offers testing, debugging, designing, and manufacturing to solve challenges including:

- RF specifications
- ME specifications
- Design layout
- Antenna integration
- Surrounding interference, etc.

### IS A SPECIFIC STANDARD REQUIRED?

- Automotive (PPAP and IATF16949)
- High reliability (MIL-PRF, T-Space, SRC9000, etc.)
- IP rating
- UL rating
- Plenum rating, etc.

### WHAT ARE THE ANTENNA SURROUNDINGS?

- Metallic components (heat sink, connectors, battery, big cap)
- Additional antennas
- Wires
- Flexible FPC
- Audio components (speaker, microphone, earpiece)
- High speed digital traces
- Specific ground layout
- Shield boxes
- Material loading close
- Human body (hand, head, body worn device)
- Potting material
- Nearby power components
- 50 Ohms line to antenna

### WHAT IS THE DESIRED FREQUENCY RANGE, MAXIMUM VOLUME AND LOCATION?

Are the electrical and mechanical specifications available, and what is the selected antenna module?

When a bigger antenna volume is available, better performances can be expected. The KYOCERA AVX Antenna Design Team will suggest the most optimized antenna shape, dimensions, and location based on the product to be developed.

### WHAT TYPE OF MOUNTING IS REQUIRED?

- RF cable & connector
- SMT
- Mag mount
- Adhesive mount
- Screw mount
- Off-board
- Pogo pin
- C-clips (spring contacts)
- One-ended soldered cable

### WHAT TYPE OF CONNECTOR IS REQUIRED?

- SMA
- RP-SMA
- TNC
- RP-TNC
- U.fl
- W.fl
- Fakra
- MMCX
- BNC
- N
- NMO

### WHAT TYPE OF CABLE IS REQUIRED?

- Micro coaxial 0.8mm, 1.13mm, or 1.37mm diameter
- RG58
- RG174
- RG316
- LMR200
- LMR400
- LMR195
- LMR240

### FOR AN EMBEDDED SOLUTION, IS PCB CLEARANCE POSSIBLE?

Is the PCB layout available to optimize the distance between the radio and the antenna, and the space from any threatening surroundings?

### ARE THE PCB LAYOUTS & 3D GERBER FILES AVAILABLE?

Helps to define a better antenna placement based on the surroundings and the PCB/product structure

This antenna is ideal to rotate the radiation patterns with a single mechanical outline, slightly to the left (WA), to the right (WB) and straight aligned with Z axis (WC), which allows to maximize system throughput and mitigate peak gain issues.

The ETH-MMW-1000 is a full anechoic millimeter wave measurement system capable of passive and active testing of wireless devices from 18 to 110GHz. KYOCERA AVX is one of the only antenna companies able to provide 5G antenna measurement systems for this range. This system is self-contained, movable, and compact enough to fit into any laboratory or production environment.

Several KYOCERA AVX locations are equipped with the ETH-MMW-1000 and are able to provide local testing services in the Americas, EMEA, and Asia. Active signaling measurements require an emulator such as ANRITSU MT8000A and MT8821C, but Keysight or R&S equipment is also compatible.

#### DEVICE SPECIFICATIONS

- Dimensions: 1.56m L x 1.24m W x 2.13m H
- Chamber frame: Aluminum
- Max DUT dimensions: 45 cm
- Max DUT weight: 10 Kg
- Total equipment weight: 430 Kg without VNA
- Positioners: 0-180° & 0-360°, accuracy 0.01°

Please visit [www.kyocera-avx.com](http://www.kyocera-avx.com) for additional information and the value proposition.

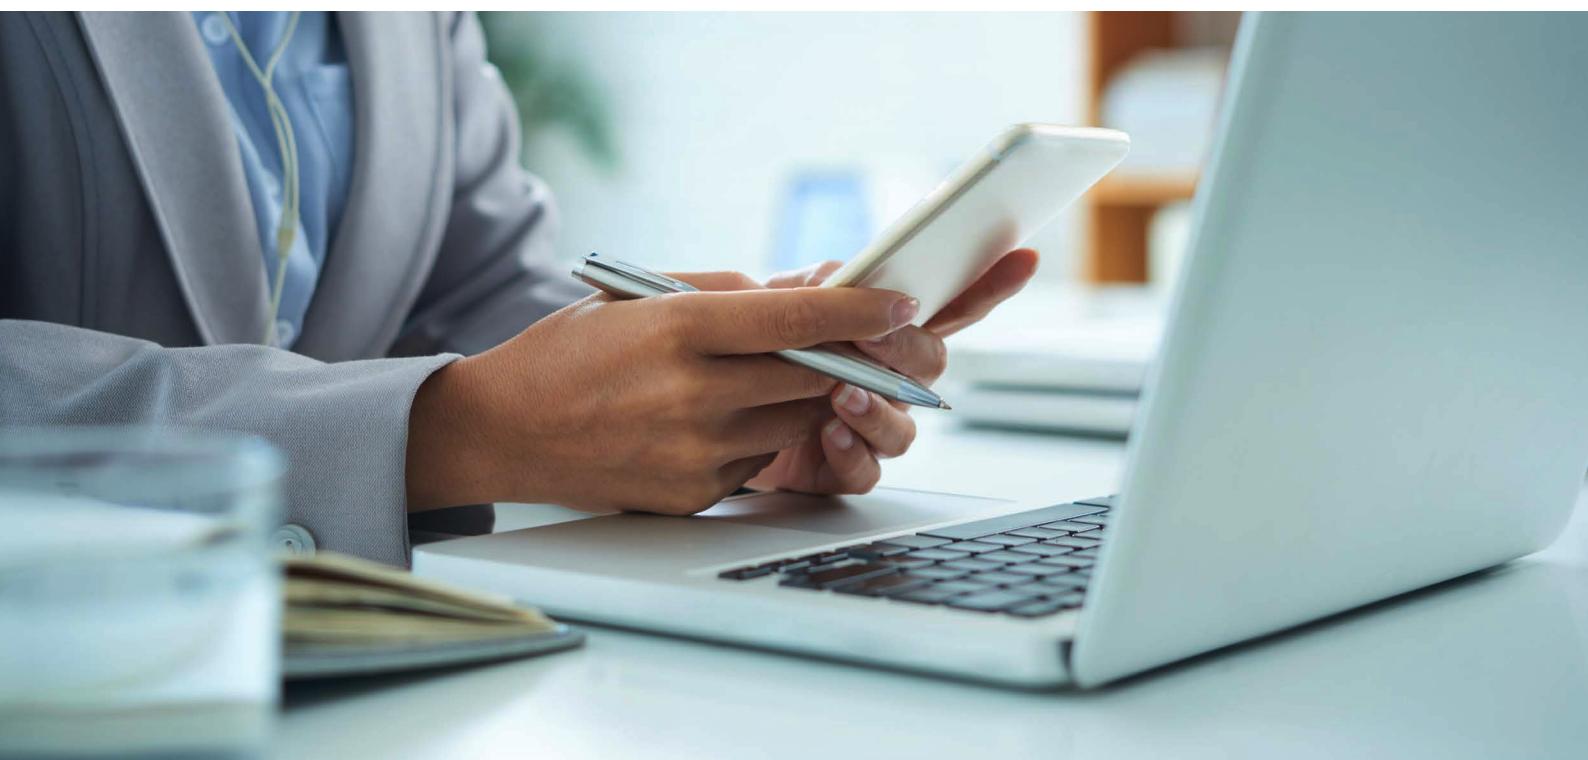

#### MEASUREMENT CAPABILITIES

- Gain
- Directivity
- Efficiency
- Beam width
- Cross polar discrimination
- Side lobe levels
- 3D radiation pattern
- Radiation pattern in any polarization
- TRP, TIS, EIRP & EIS

### ACTIVE STEERING™

Active Steering™ antenna systems boost wireless connectivity significantly. This patented technology continually optimizes the antenna's direction in real-time on a per-millisecond basis, creating multiple radiation patterns around the same antenna, and then selects the ideal pattern to hit its targeted device with the best signal.

The result is a major increase in range, reliability, and speed between devices living on the fringes of a network or hidden behind walls and hard-to-reach spaces.

**Passive Omni Directional Antennas**  
Are not 100% Omni Directional

**Passive Antennas**  
Have "null" areas of low emissions

**Active Antennas**  
Eliminate nulls by "steering" the emission  
in real-time by using intelligent algorithms  
and flexible antenna structure

**More Performance**  
Maximized signal strength

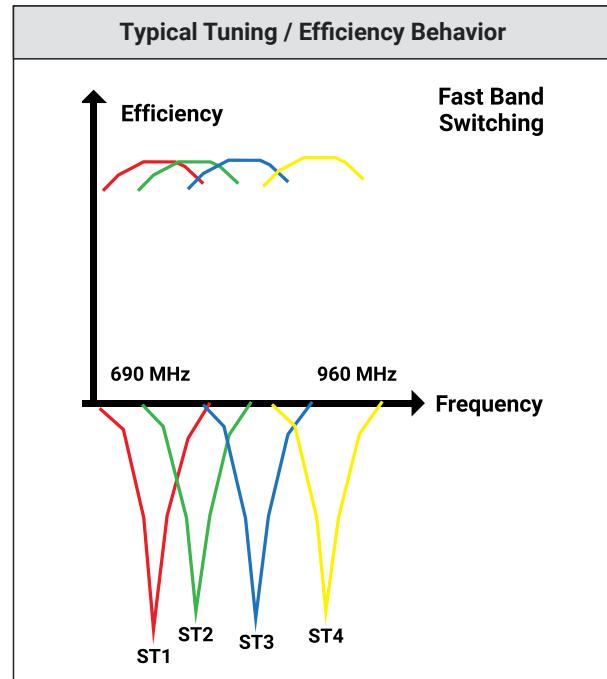

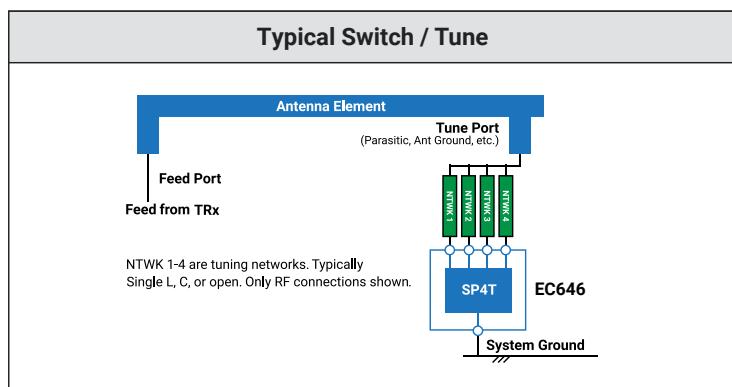

### IMPEDANCE MATCHING

Impedance matching technology enables the possibility to retune an antenna system (automatically in an open loop or closed loop based design) using pre-determined look-up tables or RSSI analysis based on a patented algorithm.

### BAND SWITCHING

With design complexity increasing every day, KYOCERA AVX's patented RF band switching technology is ideal for meeting harsh specifications when the environment reduces the original bandwidth. The reduction could be caused by the presence of metallic components, wires, harnesses, heatsink, other antennas, LCD, shielding cans, PCB grounding and connectors. Typical band switching architectures use 4 switching states in the low band operations and one state in the high band.

### ACTIVE COMPONENTS FOR BAND SWITCHING

Active switching technology benefits include: longer range, higher throughput and broader signal coverage. Connection dead spots are reduced as the RF switch and antenna are designed together, allowing for a more flexible antenna system placement and development in the device. Link optimization is obtained through a band switching concept that allows simpler and smaller antenna architecture to cover a wider bandwidth.

#### EtherChip EC646™ | High Performance SP4T Antenna

The EC646™ is a high performance shuntless SP4T ideal for band switching applications. This device can be used in a variety of applications including: cell phones, tablets, notebooks, M2M products, IoT products, other wireless devices. Its operating frequency range is from 100MHz to 3GHz, using a shuntless architecture with a low RON of  $1.2\Omega$  and an exceptional linearity of  $>+80\text{dBm}$  (IIP3). The total package is  $1.1 \times 1.5 \times 0.5\text{mm}^3$  using a 10 package and 2pin GPIO control interface.

# UPCOMING PRODUCT RELEASES

By continuing to invest heavily in R&D and submitting several new patent applications every year, KYOCERA AVX continues to further expand the company's strong technology base with newly innovative, next-generation product solutions. Below is a list of products currently in development for release.

## SAMPLE KITS

- FPC antennas
- LTE Cat-M / NB-IoT
- UWB

## 5G ANTENNAS & FEMS

- 28 GHz full front end module
- 28 GHz passive antenna array
- Sub-6 GHz passive antenna array
- Subgiga 5G bands (FPC and FR4)

## COMBO ANTENNAS (INTERNAL TYPES)

- MIMO 2x2 WIFI & WIFI 6 dual band FPC and 2 cables
- MIMO 3x3 WIFI & WIFI 6 dual band FPC and 3 cables
- MIMO 4x4 WIFI & WIFI 6 dual band FPC and 4 cables
- MIMO 2x2 4G and GPS, FPC with 3 cables
- MIMO 2x2 4G and WIFI, FPC with 3 cables
- ISM 868/915 + GPS + WIFI FPC with 3 cables
- ISM 868/915 + GPS + 4G FPC with 3 cables
- 600 MHz side and middle cable FPC type
- All bands LTE blade antenna with TNC

## ISM ANTENNAS

- 915 MHz patch
- 868 MHz patch
- 433 MHz external directive antenna

## SATCOM ANTENNAS

- S-band antenna
- L-band antenna patch antenna (non-ceramic)
- Stacked patches (L1/L2)
- Multi-band GNSS active antenna (L1/L2/L5)
- 400MHz CP low orbit antenna

## MULTIBAND EXTERNAL ANTENNAS (IP67)

- 1 inch thickness, 6-in-1 (2x4G, 3x WIFI, 1x GNSS), 6 cables
- High performance, 6-in-1 (2x4G, 3xWIFI, 1xGNSS), 6 cables
- Cost efficient rugged mag mount 4G antenna
- Cost efficient rugged mag mount MIMO 2x2 4G antenna
- Sharkfin antenna
- Fiberglass WIFI dual band antenna
- Fiberglass 2.4 GHz antenna
