LOAD DUMP VARISTORS

GENERAL DESCRIPTION

KYOCERA AVX Automotive Series Varistors provide reliable protection against automotive-related transients such as Load Dump, Jump Start, and ESD to protect the growing number of electronic systems used in automotive applications, and in addition, these are AEC-Q200 qualified.

Load Dump pulses simulate a sudden battery disconnection from the alternator. Because of the loss of the battery load, the alternator generates an overvoltage impulse. Such Load Dump pulses are high-energy pulses that can damage sensitive ICs.

Available with Glass
Coating for Harsh
Environments

ADVANTAGES

- High Reliability
- Fast Response
- High Energy Absorption
- High Current Handling
- No Temperature Derating up to 125°C
- EMI/RFI Attenuation
- Smaller Footprint
- Bi-Directional
- Lighter Weight
- JASO D001 1994
- AEC Q200 Qualified
- ISO-16750-2:2010
