The Laffer-ALEC Report on Economic Freedom: Grading America's 50 Governors has been published by the American Legislative Exchange Council, America's largest nonpartisan, voluntary membership organization of state legislators dedicated to the principles of limited government, free markets and federalism. Comprised of nearly one-quarter of the country's state legislators and stakeholders from across the policy spectrum, ALEC members represent more than 60 million Americans and provide jobs to more than 30 million people in the United States.

The American Legislative Exchange Council is classified by the Internal Revenue Service as a 501(c)(3) nonprofit and public policy and educational organization. Individuals, philanthropic foundations, companies, or associations are eligible to support the Council's work through tax-deductible gifts.

ABOUT THE AUTHORS

DR. ARTHUR B. LAFFER

Dr. Arthur B. Laffer is the founder and chairman of Laffer Associates and Laffer Investments, and many publications have named him “The Father of Supply-Side Economics.” Dr. Laffer served as a member of President Reagan’s Economic Policy Advisory Board for both terms and advised Prime Minister Margaret Thatcher on fiscal policy in the United Kingdom during the 1980s. He has been a faculty member at the University of Chicago and University of Southern California. One of his earliest successes in shaping public policy was his involvement in Proposition 13, the groundbreaking California initiative that drastically cut property taxes in the state in 1978. In March 1999, he was noted by Time magazine as one of “the Century’s Greatest Minds” for his invention of the Laffer Curve, which has been called one of “a few of the advances that powered this extraordinary century.” He has received many awards for his economic research, including two Graham and Dodd Awards from the Financial Analyst Federation and The Hayek Lifetime Achievement Award in 2016. In December 2017, Dr. Laffer became the first recipient of the American Legislative Exchange Council’s Laffer Award for Economic Excellence, and in December 2019, President Donald Trump awarded Dr. Laffer with the Presidential Medal of Freedom for his contributions in the field of economics. He graduated from Yale with a bachelor’s degree in economics in 1963 and received both his MBA and Ph.D. in economics from Stanford University.

DONNA ARDUIN

Donna Arduin is one of the nation’s most successful veterans of state budget management and tax reform, and, as Budget Director/Deputy Director, led toward responsibility the budgets of Michigan (Governor John Engler), New York (Governor George Pataki), Florida (Governor Jeb Bush) and California (Governor Arnold Schwarzenegger). She established a reputation for long-term policy planning linked with fiscally conservative budgeting. For the past 15 years, together with economists Dr. Arthur Laffer and Steve Moore, the Arduin, Laffer, and Moore consulting firm has worked on economic studies for a vast number of industries and think tanks across the country, and on successful economic development projects. She also consults for governors and governor candidates, including Florida Governor Rick Scott, Illinois Governor Bruce Rauner, and California Governor Candidate Meg Whitman. She also consulted for Florida Speaker of the House Marco Rubio. Ms. Arduin sits on a number of boards, both private and not-for-profit, and has been a senior fellow for several state think tanks. A graduate of Duke University, Ms. Arduin graduated with honors in economics and public policy. Prior to her career in the public sector, she worked as an investment banker in New York and Tokyo.

STEPHEN MOORE

Stephen Moore formerly served on The Wall Street Journal's editorial board and frequently wrote on the economy and public policy. In January 2014, Moore returned to The Heritage Foundation—about 25 years after his tenure as the Grover M. Hermann Fellow in Budgetary Affairs from 1984 to 1987. Moore now serves as the Chairman of the FreedomWorks Task Force on Economic Revival. He was previously the founder and president of the Club for Growth, which raises money for political candidates who favor free-market economic policies. Moore also founded the Free Enterprise Fund before joining The Wall Street Journal. Over the years, Moore has served as a senior economist at the Congressional Joint Economic Committee and as a senior economics fellow at the Cato Institute, where he published dozens of studies on federal and state fiscal policy. He was also a consultant to the National Economic Commission in 1987 and research director for President Ronald Reagan's Commission on Privatization. During the 2016 presidential campaign, Moore served as a senior economic adviser to Donald Trump, where he worked on tax reform, regulatory reform, and energy policy. Moore is a Senior Economic Analyst at CNN along with writing regularly for National Review, Forbes, Investor's Business Daily, The Washington Times, and Orange County Register. Moore holds a Master of Arts in economics from George Mason University. He has authored numerous books, including *Who's the Fairest of Them All*, *It's Getting Better All the Time*, *Still an Open Door?*, *An Inquiry into the Nature and Causes of the Wealth of States*, *Fueling Freedom: Exposing the Mad War on Energy* and the recently released *Trumponomics: Inside the America First Plan to Revive Our Economy* with Dr. Arthur Laffer.

JONATHAN WILLIAMS

Jonathan Williams is Chief Economist and Executive Vice President of Policy at the American Legislative Exchange Council (ALEC), where he works with state policymakers, congressional leaders and members of the private sector to develop economic policy solutions for the states. Williams also founded the ALEC Center for State Fiscal Reform in 2011. Prior to joining ALEC in 2007, Williams served as staff economist at the nonpartisan Tax Foundation, authoring numerous tax policy studies. Williams' work has appeared in many publications, including The Wall Street Journal, Forbes, The Financial Times, Toronto Star, The Australian and Investor's Business Daily. He is a contributor for The Hill and a columnist at Tax Analysts, the leading provider of tax news and analysis for the global community. Williams also serves on the Advisory Board of the State Financial Officers Foundation (SFOF) and as an adjunct fellow at the Kansas Policy Institute. He has written for the Ash Center for Democratic Governance and Innovation at Harvard's Kennedy School of Government. In addition, Williams was a contributing author of *In Defense of Capitalism* (Northwood University Press). He has spoken to audiences across all 50 states and provided testimony for the U.S. Congress, as well as numerous state legislative bodies. His work has been featured at the federal level by The White House, the Congressional Joint Economic Committee and the U.S. House Committee on Ways and Means. He is a frequent guest on talk radio shows and has appeared on numerous television outlets, including the PBS NewsHour, Fox Business News and Bloomberg. Williams was also the recipient of the prestigious Ludwig von Mises Award in Economics.

ACKNOWLEDGMENTS

The Laffer-ALEC Report on Economic Freedom: Grading America's 50 Governors was developed by Laffer Associates and the American Legislative Exchange Council and made possible by the Empower Dallas Foundation, thanks to the generosity of Mr. James Dondero.

The authors would like to thank Lisa B. Nelson, Nick Drinkwater, Richard Neikirk, Max Myers, Harrison Denman, Christine Phipps, Joel Sorrell, Lee Schalk, Thomas Savidge, Nicholas Stark, Jackson Brown, and Lourdes Bautista for their support in producing this report.

CHAPTER

1

ECONOMIC PERFORMANCE

ECONOMIC PERFORMANCE

ECONOMIC PERFORMANCE

Economic performance is a key component of this report's rankings, as the vitality of a state's economy is a wonderful proxy for the standard of living in each state, and perhaps more importantly, the rate at which the standard-of-living is improving. The economic performance rankings are based on two measurements of current economic growth (gross state product growth and the unemployment rate), and two measurements of potential economic growth (interstate migration and the quality of education).

GROSS STATE PRODUCT GROWTH

The growth of gross state product (GSP) is a classic and broad measure of economic well-being. A state may have high employment rates, fantastic public education and elevated in-migration, but none of these measures are truly adequate in fully measuring productivity. A state may be a destination for retirees, a boondoggle of government employees or losing many of their students to other states upon finishing their education, all of which do little to add to state production. A governor's policies can either impede or foster economic growth, and the effects of those policies can linger for years after a governor's term.

The highest ranked governors and their states in GSP growth include Tate Reeves (MS), Brad Little (ID), Spencer Cox (UT), Kristi Noem (SD) and Jared Polis (CO). In a time of economic uncertainty, these states found ways to grow their economies. A notable governor in this category is Governor Kristi Noem (SD). Prior to Noem's inauguration, South Dakota was, for some, an afterthought in the national economic conversation—but no longer. Since Noem began her term, South Dakota's average GSP growth has been nearly 1% for every quarter. If these trends continue, South Dakota may become a major player in the nation's overall economy.

When Governor Jared Polis (CO) entered office, his state was already growing rapidly. While sustained high economic growth is difficult to maintain because of business cycle effects, Colorado has managed to grow by nearly a full percentage point on average for every quarter since Polis' inauguration.

The lowest ranked states in GSP growth were Wyoming (50th), Oklahoma (49th), Alaska (48th), Louisiana (47th) and Michigan (46th). We see a trend with this grouping of energy dependent state economies, excluding Michigan. For these states, the volatility of global prices over the last year has had a disparate impact on the hydrocarbon production industry and helps to explain their underperformance. In most cases, global and intranational phenomena such as pandemics, supply chain disruptions or overarching federal policy shifts have an approximately proportional impact on each state. The year 2020 witnessed all-time low oil prices, with global market crude oil prices even briefly falling below zero. Inevitably, the low prices within the market were accompanied by low revenues and profits for producers, intensely damaging states relying on energy production to fuel GSP growth.

However, as any money manager would advise, portfolio diversification is a necessity. Governing a state with abundant natural resources is a wonderful opportunity but focusing solely on energy production leaves the state exposed to the fluctuations of that industry. These governors are expected to hedge their economic portfolios over time, providing a welcoming environment for migrating businesses outside of the energy sector. These sentiments hold especially true presently, with the rhetoric from the Biden Administration.

UNEMPLOYMENT RATE

Unemployment rates are often used as barometers for the state of an economy. Governors can play a role in influencing their states' economies by encouraging private investment in their states, making work more attractive for potential workers through lower taxes and limiting welfare benefits which often reduce the incentive to work. Governor Greg Gianforte (MT) and Governor Henry McMaster (SC) deserve special recognition for being the first two executives who took the politically difficult, but principled, approach of decoupling from the enhanced federal unemployment benefits in June of 2021. This policy decision began a trend of governors ending enhanced federal unemployment benefits in their respective states. The catalyst for this was the disincentive to work created by increasing the amount of unemployment benefits as well as the eligibility expansion.

In 2020, the COVID-19 pandemic and government-imposed lockdowns caused some of the highest state unemployment rates on record. For example, Nevada, a state with a thriving employment environment has seen unemployment rates as high as nearly 15% during the pandemic. However, Nevada's employment levels today are not nearly what they were in early 2020.

The states with the largest improvements in unemployment rates were Montana (1st), North Dakota (2nd), Vermont (3rd), Nebraska (4th) and South Dakota (5th). Meanwhile, states like New Mexico (50th), Alaska (49th), California (48th), West Virginia (47th) and Louisiana (46th) are bringing up the rear.

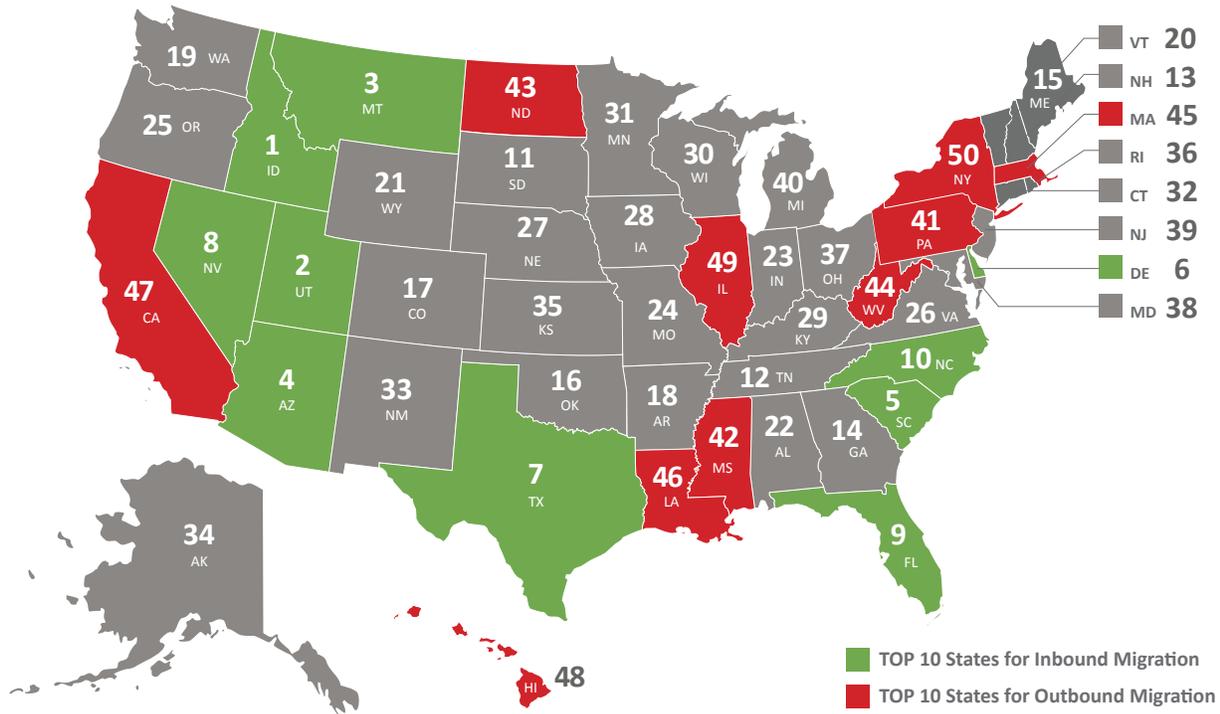

INTERSTATE MIGRATION

People vote with their feet. If a state is losing residents and employment to other states, it is expected that the governor will react by adjusting current policy priorities to counteract the outbound migration. Domestic migration patterns of individuals, businesses and taxpayers provide one of the most holistic measures of state economic performance. The metric provides quantitative and qualitative insight as to why taxpayers are leaving or entering a state. There are numerous economic factors at play in an individual's decision-making process when it comes to moving across state lines, all of which become quantifiable when interstate migration is calculated. Few people are moving to states in which

ECONOMIC PERFORMANCE

| 48 | Hawaii | -0.9% |
| 49 | Illinois | -1.1% |
| 50 | New York | -1.8% |

Source: U.S. Census Bureau, Tax Foundation

employment opportunities are scarce and state-level policies hinder growth and prosperity. The reverse is certainly true for economically prosperous states. They experience an influx of domestic migrants who open businesses, pay state taxes and add their unique skill sets to the local economy. In all, interstate migration acts as a measurable stand-in for state desirability and competitiveness.

The data used to calculate interstate migration is a normalized net domestic migration statistic.¹ The variable is normalized to adjust for each state's population. Out-migration to other states is subtracted from in-migration to each state and ranked accordingly after normalizing the results to adjust for state population differentials. It is no surprise to see the policy and performance commonalities among the top ranked governors.

TABLE 2: BEST AND WORST TOTAL ABSOLUTE NET IN-MIGRATION

| TOP 5 | | | | |
|---|------------------|----------------|--------------------------|--|
| Population Adjusted In-Migration Rank* | Governor | State | Inauguration Year | Total Absolute Net In-Migration** |
| 1 | Ron DeSantis | Florida | 2019 | 313,975 |
| 2 | Doug Ducey | Arizona | 2015 | 457,732 |
| 3 | Greg Abbott | Texas | 2015 | 746,316 |

| 48 | Andrew Cuomo | New York | 2011 | -1,563,117 |
| 49 | Gavin Newsom | California | 2019 | -450,720 |

*Rank in this year's report.

**Total since each respective governor's inauguration day.

Note: Governor Greg Gianforte is not ranked in this variable. See methodology.

Source: U.S. Census Bureau, Authors' calculations

Governor Ron DeSantis (FL) is the clear winner in this category. Carrying on Florida's previous success in providing a pro-growth business environment has done wonders for the state's economy. With no personal income tax and no pervasive lockdowns, Florida has been a shining example, keeping its economy open throughout Governor DeSantis' term. A similar story plays out with Governor Greg Abbott (TX), a staunch supporter of pro-growth policy. Texas has also seen an influx of domestic migrants, especially throughout the past year.

1. See Methodology for details

ECONOMIC PERFORMANCE

The nine states that avoid a personal income tax have a strong showing in this category with five of those states appearing in the top 10 of the normalized domestic migration rankings. Those five states and their rankings are Florida (1st), Texas (3rd), Nevada (5th), Tennessee (9th) and Washington (10th). Overall, the nine states with no personal income tax have an unweighted average rank of 14.4, while states with a personal income tax have an unweighted average rank of 27.9.

The difference maker can also be what neighboring states are doing wrong. For example, Arizona ranked second in the net domestic migration category. While Arizona has a relatively low personal income tax, it also shares a border with California—which carries a top marginal personal income tax rate of 13.3%. The mistakes of California are economic fuel for Arizona as Americans leave the Golden State for the Copper State. People and jobs are mobile, so state lawmakers must remain cognizant of the economic policies of surrounding states in order to maintain a competitive business environment. Additionally, Arizona’s significant pro-growth tax cuts from this session, which were passed by free market majorities in the legislature and signed into law by Governor Doug Ducey, will substantially improve Arizona’s competitiveness in the years to come.²

EDUCATION PERFORMANCE

TABLE 3: EDUCATION QUALITY RANKINGS

| Rank | Governor | State |

2. <https://www.alec.org/article/arizona-lawmakers-approve-historic-tax-relief/>

Incentives matter, and people respond to incentives in a variety of different ways. Positive incentives—like ease of doing business—tell people what to do. Negative incentives—like taxes—tell people what not to do. If a governor wants to see domestic migration to their state, they need to create a policy environment that fosters economic growth and opportunity.

Education performance is a crucial economic indicator of a state's future economic performance. The policies a governor implements to improve the education system will have repercussions for decades to come, as the students during their term in office are the future wage-earners and taxpayers of that state. Education performance is based on fourth grade reading scores and progress as measured by the National Assessment of Education Progress (NAEP) Nation's Report Card. Among the core subjects studied throughout a student's K-12 education, literacy is a critical foundational skill. Proficiency in reading, especially following fourth grade, will have a lasting impact on all other areas of study. Retention of concepts in science, history and mathematics beyond the fourth grade becomes difficult without an adequate ability to analyze and interpret reading materials. Fourth grade reading scores act as a predictive metric for proficiency in other areas of study and all successive grade levels.

The 2019 Nation's Report Card had mixed results. The fourth grade reading and writing scores show more states with students performing significantly above the national average than those that scored significantly below. This tells us median test scores are above the average test score, and, more directly,

MISSISSIPPI'S PROGRESS ON EDUCATION

Highlights from the 2019 NAEP show:

- Mississippi is the only state in the nation to show significant increases in three of the four core NAEP subjects in 2018: fourth grade math and reading and eighth grade math.
- For the first time, Mississippi fourth-graders scored higher than the nation's public school average in mathematics and tied the national average in reading.
- Mississippi's black and white students living in poverty outperformed their peers nationally with students from low-income homes earning higher scores than the national average in all four NAEP subjects. Hispanic students from low-income families outperformed peers within their demographic nationally.

ECONOMIC PERFORMANCE

it means those states at the bottom are bringing the U.S. average down. Students in nine states did not read at basic achievement levels, and 18 states' fourth grade math scores were below basic proficiency. Only 12 states had fourth grade students reading above proficient levels.

Only 10 states improved their fourth grade reading scores from 2017 to 2019. Those states, listed in order of most improved, are Mississippi, Nevada, Arizona, Hawaii, California, Michigan, South Dakota, Colorado, Tennessee and Wisconsin. Colorado was the only state ranked in the top 10 for both improvement (8th) and overall test scores (5th).

Colorado's progress in fourth grade reading measures follows substantial restructuring of state education standards through the Colorado Reading to Ensure Academic Development (READ) Act of 2012, which shares similarities with the "Just Read, Florida!" program established in 2001. The Colorado READ Act was implemented to ensure all students achieved grade-level reading proficiency upon completion of grade three.³ Governor Polis has been a strong supporter of these priorities, strengthening the READ Act implementation measures in a 2019 amendment.⁴ The Administration has developed strategies to continue Colorado's focus on literacy education.

CONCLUSION

Economic Performance provides a succinct description of each governor's achievement relative to their peers. However, the performance metrics outlined within this Key Performance Indicator (KPI) only show which governors are producing superior or improving results. Economic Performance tells us where we are but not how we got here. Chapter 2 and Chapter 3 will discuss the Fiscal Policy KPI and Executive Policy KPI respectively. These discussions will help explain how we got to where we are now.

CHAPTER

2

FISCAL POLICY

A circular logo composed of several colored segments (red, orange, yellow, green, blue, purple) arranged in a ring. The words "FISCAL POLICY" are written in white, bold, sans-serif capital letters across the center of the ring.

FISCAL POLICY

FISCAL POLICY

Among the 50 governors, there is a vast array of differences in individual approaches to governing. Setting aside the disputes and controversies among state executives, it is important to acknowledge that all of these political leaders, regardless of party affiliation, are striving to reach the same goal. All governors, in general terms, are pursuing the expansion of wealth and prosperity for their residents, aiming to maximize well-being. Of course, there are differing perspectives on how “well-being” or “prosperity” are defined. However, most agree that successful governing results in lower unemployment, rapid advances in the standard-of-living (measurable in gross state product) and higher real incomes. Those measures of economic performance can be easily and objectively measured. It is simple to sort performance metrics into echelons that draw either applause or criticism.

It is a much more difficult task to quantify the methods governors employ to reach those goals and to determine which strategies are preferable over others. To do this, the rankings rely heavily on empirical analysis in conjunction with economic theory. We review economic performance and policy fluctuations over time and apply an understanding of rational human responses to incentives.

Setting out to achieve prosperity for their respective states, each governor utilizes a set of fiscal policy tools. Of course, the degree of control over those tools varies as the constitutional authority granted to governors by their state constitutions differ. While not every governor enjoys a partisan trifecta (single party control over both chambers of the state legislature plus the governor’s office), their options remain essentially the same. Every governor proposes state spending and collects taxes to finance state spending. The operational limit faced by each state executive is solely the magnitude of their tax collections (tax rates and bases) and how much they plan to spend.

With the tax-and-spend portfolio comes an obligation of fiscal responsibility. It is unlikely voters will flock to the polls to support a candidate raising their taxes, and some may not support a budget cut to their state’s benefit programs either. The seemingly impossible task is to raise enough tax revenue to fund essential programs without causing severe economic damage. This balancing act begins with the budget proposal.

All governors propose a budget and corresponding tax policy to their legislature for an annual or biennial period, depending on the state. These budget proposals have a direct impact on a state’s economy. Governors propose changes to the state’s tax system with focus on how and where the revenue stream for state programs and support systems will be collected and distributed. The method of taxation informs economic decisions made by people and businesses who are directly impacted by changes to policies such as state personal income taxes, property taxes or corporate taxes. Establishing a successful state budget is a difficult task to navigate, but the answer to solving statewide issues is generally not more spending. The size of a state budget should be proportionate to a state’s private economy. If government is too large, it crowds out private economic activity and leads to an economic decline. Likewise, if

politicians use debt as a tool to fund unproductive activities that blunt incentives to work or use debt to paper over budget deficits, debt can be a serious drag on future economic performance.

TAXES

Income taxes are a tax on production, as opposed to taxes on consumption, like sales taxes. Income taxes of all kinds are detrimental to economic activity because they reduce the incentives to work, earn and invest. This is particularly harmful because production is the source of economic growth. If producing becomes too expensive, economic growth stagnates and people and businesses move to states with lower costs of living. Progressive income taxes exacerbate the negative effects of an income tax, creating an incentive for businesses and individuals to move out of state. The existence of high corporate tax rates in one state creates an incentive for businesses to leave, while low tax rates in another state may draw more business, employees and investment. Most people do not enjoy sacrificing a portion of their paycheck to taxation and will go above and beyond to avoid doing so—including migrating to a more tax-friendly state.

In Tennessee, a state with no traditional state tax on earned income, Governor Bill Lee (TN) has fully eliminated the Volunteer State’s “unearned” income tax, which taxed income derived from capital gains, dividends and interest. Governor Chris Sununu (NH) approved a phaseout of a similar tax, known as the Interest and Dividend Tax, by the end of 2026. This will strengthen both New Hampshire’s and Tennessee’s ability to attract new residents. In addition to the removal of “unearned” income taxation, New Hampshire will reduce its major business taxes. Governor Sununu has earned New Hampshire a full-fledged membership to the personal-income-tax-free club of 9, living up to their “live free or die” motto.

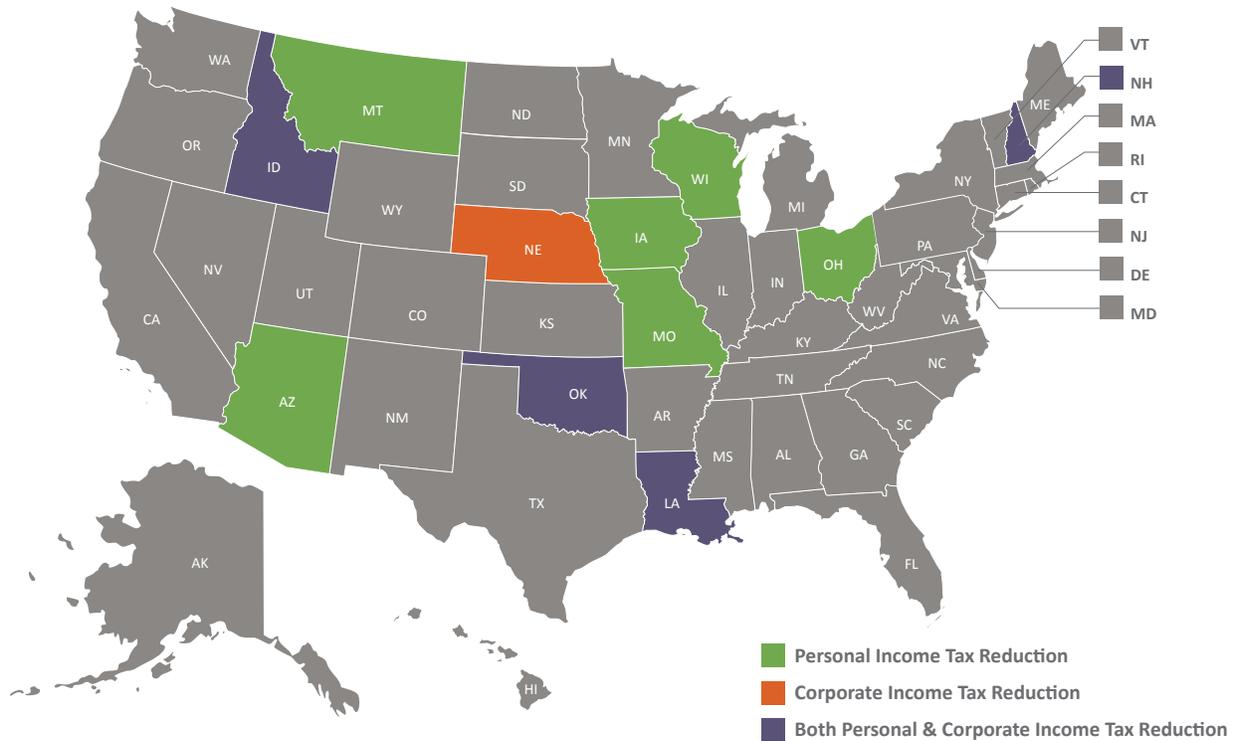

Several other states enacted reductions to their top personal income tax rates prior to the publication of these rankings in November of 2021. Those states are Arizona, Idaho, Iowa, Montana, Nebraska, Ohio, Oklahoma and Wisconsin.

Idaho Governor Brad Little signed a bill reducing the state’s flat corporate income tax rate and top personal income tax rate from 6.925 percent to 6.5 percent, while consolidating seven personal income tax brackets into five. Iowa Governor Kim Reynolds signed into law a bill that consolidated the state’s nine personal income tax brackets into four and will reduce the top rate from 8.53 percent to 6.5 percent, if state revenues grow at least 4 percent. Nebraska Governor Pete Ricketts signed legislation reducing the state’s top corporate income tax rate from 7.81 percent to 7.25 percent, with legislative intent to further reduce this rate to 6.84 percent in 2025. Ohio Governor Mike DeWine’s budget consolidated personal income tax brackets from five into four, reduced the top marginal rate from 4.797 percent to 3.99 percent and cut the remaining rates by 3 percentage points across the board. Wisconsin Governor Tony Evers’ budget reduced the second highest personal income tax rate from 6.27 to 5.3 percent.

FISCAL POLICY

FIGURE 2: STATE PERSONAL AND CORPORATE INCOME TAX REDUCTIONS IN 2021 (as of October 1, 2021)

Source: Tax Foundation

ARIZONA GOVERNOR DOUG DUCEY

Governor Ducey is a businessman who understands how to attract customers to his state. As a former CEO of Cold Stone Creamery, Ducey and his business partner grew their franchise to more than 1,400 locations before they sold the company in 2007. When he took office in 2015, Ducey shifted his focus from balancing customer satisfaction and profits to spending and taxes. That year, Arizona faced a \$1.5 billion budget deficit which he eliminated by reducing spending without raising taxes. Arizona's economy has taken off. The state is using surplus funds to pay down debt and unfunded pension liabilities, bolster its choice-based education system and reduce income and property taxes.

Arizona voters narrowly adopted Proposition 208 in November 2020, adding a 3.5 percentage point surcharge to incomes over \$250,000, raising the state's top personal income tax rate from 4.5 percent to 8 percent. Governor Ducey and the Arizona legislature came into session in 2021 and promptly reversed these tax increases, reduced its four brackets into two and lowered the top marginal rate. In a column for The Phoenix Business Journal, Governor Ducey, Senate President Karen Fann (ALEC's 2022 National Board of Directors Chairwoman) and Speaker Rusty Bowers wrote: "There's a reason that Arizona has become a beacon of economic prosperity. This economic growth, combined with restrained spending and conservative budgeting by our legislature and the Governor's office, has us sitting on billions of surplus dollars. Our view is those dollars aren't the government's money—those dollars belong to hardworking taxpayers."¹

COLORADO GOVERNOR JARED POLIS

Governor Polis is a businessman as well. He started his first business, American Information Systems, from his college dorm room. By the time he was 30, he had launched three successful companies, including ProFlowers, one of the world's leading online flower retailers. He previously served five terms as the Congressman from Colorado's 2nd district and was the only Democrat member of the Liberty Caucus. Polis exemplifies the importance of placing pro-growth income tax policy over partisanship.

Colorado reduced its flat personal income tax rate from 4.63 percent to 4.55 percent in exchange for reducing several exemptions. Business tax liability was reduced by allowing exemptions on the first \$50,000 of the business equipment tax. This was achieved through the successful passage of a state constitution amendment ballot question in 2020 and key companion legislative victories.

MONTANA GOVERNOR GREG GIANFORTE

Governor Gianforte is a businessman and former Congressman. He and his wife Susan founded RightNow Technologies two decades ago in their Bozeman home and created over 500 jobs in Montana. Gianforte was elected to the governorship in November of 2020, campaigning on getting Montana open for business. He had been a U.S. Representative, representing Montana in Congress since 2017.

1. <https://www.bizjournals.com/phoenix/news/2021/06/23/our-view-arizona-taxpayers-need-relief.html>

FISCAL POLICY

Montana reformed its personal and corporate income taxes in Governor Greg Gianforte's first legislative session, reducing personal income tax rates, repealing 16 tax credits and changing the apportionment factor for corporate income taxes. The state's top personal income tax rate will be reduced from 6.9 percent to 6.5 percent in 2022. Montana also cut business equipment taxes for 4,000 Montana businesses, including 1,500 farming and ranching operations, by raising the exemption threshold from \$100,000 to \$200,000.

OKLAHOMA GOVERNOR KEVIN STITT

Governor Stitt is a businessman who founded Gateway Mortgage Group in Tulsa on his personal computer and grew his business into more than 160 mortgage centers employing more than 1,400 people. Stitt's adherence to small government policies has reduced income taxes substantially and helped Oklahoma's economy to grow.

Governor Stitt signed legislation that will reduce the state's personal income tax rates by 0.25 percentage points across the board, bringing the top rate down from 5 percent to 4.75 percent. He also signed into law a corporate income tax reduction that lowered the rate from 6 percent to 4 percent, tying Missouri for one of the lowest corporate income tax rates in the nation, behind only North Carolina at 2.5 percent and Wyoming and South Dakota, the only two states that do not tax business income.

SPENDING

Government spending and taxation are two sides of the same fiscal coin. Every dollar spent by the government is a dollar removed from the private sector, which would have otherwise generated economic activity. Governors are faced with an opportunity cost calculation to determine where that dollar will be more useful to their states. Government spending per capita measures that extent, and this report tracks average spending over a governor's term. For 2021, we have included each governor's proposed budget. Most governors were required to propose their 2021 budgets prior to passage of the American Rescue Plan Act (ARPA) at the federal level, providing isolated insight into the governor's own fiscal policies.

“ *Keep your eye on one thing and one thing only; how much the government is spending, because that's the true tax. The thing you should keep your eye on is what government spends, and the real problem is to hold down government spending as a fraction of our income.*

– Milton Friedman ”

Governors' general fund budget proposals for fiscal year 2022 collectively amounted to nearly \$1 trillion, a five percent increase from FY 2021. For FY 2022, 39 governors have called for general fund spending increases.² FY 2021 is on track to see state spending three percent higher than in FY 2020.³ Education spending has been significantly increased over last year, as well as pandemic-related expenditures which should be one-time expenses, not new, ongoing government programs. This increase in pandemic related spending reflects a growth in the state apparatus and the way governors and legislators perceive their role in crafting policy and directing people's everyday lives.

Monitoring total spending (all funds, including general funds, special funds, federal funds and rainy-day funds) is the best way to measure true state spending on an apples-to-apples comparison between states.

This report ranks governors on their spending patterns over their terms on a per-capita basis, in other words, relative to the population of the state.

TABLE 4: SPENDING PER CAPITA RANKINGS

| Rank | Governor | State | Rank | Governor | State |
|------|------------------|----------------|------|------------------------|---------------|
| 1 | Greg Abbott | Texas | 26 | Tom Wolf | Pennsylvania |
| 2 | Ron DeSantis | Florida | 27 | John Bel Edwards | Louisiana |
| 3 | Roy Cooper | North Carolina | 28 | Ralph Northam | Virginia |
| 4 | Chris Sununu | New Hampshire | 29 | Tate Reeves | Mississippi |
| 5 | Brian Kemp | Georgia | 30 | Kim Reynolds | Iowa |
| 6 | Steve Sisolak | Nevada | 31 | Larry Hogan | Maryland |
| 7 | Mike Parson | Missouri | 32 | Mark Gordon | Wyoming |
| 8 | Henry McMaster | South Carolina | 33 | Janet Mills | Maine |
| 9 | Brad Little | Idaho | 34 | Andrew Cuomo | New York |
| 10 | Kay Ivey | Alabama | 35 | Tony Evers | Wisconsin |
| 11 | Eric Holcomb | Indiana | 36 | Tim Walz | Minnesota |
| 12 | Bill Lee | Tennessee | 37 | Charlie Baker | Massachusetts |
| 13 | Spencer Cox | Utah | 38 | Asa Hutchinson | Arkansas |
| 14 | Doug Ducey | Arizona | 39 | Andy Beshear | Kentucky |
| 15 | Kristi Noem | South Dakota | 40 | Gavin Newsom | California |
| 16 | Jay Inslee | Washington | 41 | Doug Burgum | North Dakota |
| 17 | Pete Ricketts | Nebraska | 42 | Michelle Lujan Grisham | New Mexico |
| 18 | Kevin Stitt | Oklahoma | 43 | Ned Lamont | Connecticut |
| 19 | Gretchen Whitmer | Michigan | 44 | Jim Justice | West Virginia |
| 20 | Phil Murphy | New Jersey | 45 | Phil Scott | Vermont |
| 21 | Greg Gianforte | Montana | 46 | Daniel McKee | Rhode Island |
| 22 | Jared Polis | Colorado | 47 | David Ige | Hawaii |
| 23 | J.B. Pritzker | Illinois | 48 | Kate Brown | Oregon |
| 24 | Laura Kelly | Kansas | 49 | John Carney | Delaware |
| 25 | Mike DeWine | Ohio | 50 | Mike Dunleavy | Alaska |

2. Authors' calculations

3. Authors' calculations

FISCAL POLICY

NOTABLE FY 2022 PRE-ARPA BUDGET PROPOSALS

- Arkansas Governor Asa Hutchinson proposed reducing the income tax rate for new residents.
- Colorado Governor Jared Polis proposed using surplus funds to reduce income tax rates, bolster reserves and provide direct aid to small businesses affected by the pandemic.
- Georgia Governor Brian Kemp proposed closing a projected budget gap with wide-ranging cost reductions and significant cutbacks in bond financing.
- Mississippi Governor Tate Reeves proposed eliminating the state's income tax. Mississippi Speaker, Philip Gunn, a member of the ALEC Board of Directors, led a successful, bipartisan effort in the Mississippi House to pass a phase out of the personal income tax over a 10-year period.
- Montana Governor Greg Gianforte proposed reducing the state's top marginal income tax rate, reducing business equipment taxes, reducing capital gains taxes on employee-owned stock sales and expanding a tax credit for apprenticeship training.
- Nebraska Governor Pete Ricketts proposed over \$1.3 billion in property tax reductions and exemptions for military retirement income from taxation.
- New Hampshire Governor Chris Sununu proposed eliminating the income tax on investment earnings and reducing the state tourism and business enterprise taxes.
- Oklahoma Governor Kevin Stitt proposed reducing corporate income taxes, shifting more state employees from a classified to a merit system and paying for a voter-approved Medicaid expansion.
- Utah Governor Spencer Cox proposed tax credits for social security benefits and for dependents.
- West Virginia Governor Jim Justice proposed a phase-out of the state's personal income tax by expanding sales taxes.
- Wyoming Governor Mark Gordon proposed closing a projected budget gap through a 15 percent spending reduction for agencies and state higher education funding.

DEBT

Depending on how the government accounts for debt, state spending can vary widely. State government debt comes in many forms, primarily bonded debt and unfunded liabilities in government workers' pensions and other benefits. The change in state debt over a governor's term is included to shine a light on any significant changes, for better or for worse.

New Jersey and Illinois have significantly underfunded their state pensions for years, allowing their reported debt totals to appear smaller than they are, yet creating an enormous unfunded liability to be dealt with at a later date. Issuing bonded debt for state operations is a similarly discouraged fiscal practice but can also manipulate spending to appear artificially low. Unfunded state pension liabilities which totaled, collectively, in the trillions of dollars before the COVID-19 pandemic, jumped significantly from 2019 to 2020.⁴ Most states' debt also grew during the pandemic.⁵

Governors' debt policies are ranked based on their track record of state debt per capita and relative level of pension fund debt. States typically issue debt for long-lasting capital projects. There are more risky uses of debt that some states employ, generally to avoid budget balancing requirements or to play sleight-of-hand games with their spending numbers. These budget gimmicks eventually catch up to reality and cause significant fiscal and economic problems down the road. These long-term problems compound and are often worse than avoiding accounting tricks altogether.

Similarly, prudent governors aim to keep their state employee pension funds actuarially sound. However, some states deliberately underfund required annual deposits for state budgets into pension funds, which can appear positive for short-term budget balancing, but is bad for the future. Governors cannot control every aspect of pension balance, which to some extent include actuarial assumptions, so their rank is influenced by significant fluctuations in pension funding ratios rather than the inconstancy of varying investment earnings.

ENHANCED UNEMPLOYMENT BENEFITS

The U.S. economy was growing at a rapid pace prior to the COVID-19 pandemic, and unemployment was at an all-time low (just over 3%). The pandemic put a halt to the national growth trend, and growth has since varied widely by state, largely depending on economic policies put in place as a response to public health concerns. A significant factor determining how quickly states removed themselves from their pandemic slump revolved around the duration and magnitude of these economic policy responses, specifically when enhanced unemployment benefits were discontinued and how generous the unemployment benefits were compared to average incomes within the state.

“

“It is never a surprise that when you tax people who work, and pay people not to work, the result will be fewer people working.”

– Dr. Arthur B. Laffer ”

FISCAL POLICY

The Federal Pandemic Unemployment Compensation (FPUC) Program was approved by Congress under the Coronavirus Aid, Relief and Economic Security (CARES) Act in 2020 to mitigate the impact of shutdowns, lockdowns and restrictions on business. Federal policymakers have pushed through a vast array of welfare benefits, unemployment insurance bonuses and tax-incentive increases, while also suspending many traditional requirements for eligibility and extending the eligibility term for benefit payments. The average state unemployment benefit in 2019 stands at about \$330 per week according to Department of Labor Data. With the federal supplement, Americans received an average of \$630 in weekly unemployment benefits. This is equivalent to over \$15 per hour, or roughly a \$32,000 annual salary. Extending aid into 2021, Congress passed the American Rescue Plan Act (ARPA), promising \$1.9 trillion in federal relief funding. Among several relief programs in the bill was the continuation of weekly bonus federal unemployment checks for \$300 until September 6, 2021.

The Foundation for Government Accountability (FGA) calculated that a Florida father of two could receive \$3,642 per month to stay home, roughly 144 percent more than a full-time minimum wage worker typically earns in Florida, and 17 percent more than the median salary of an average full-time worker in Florida.⁶ Accounting for additional non-cash benefits available—such as housing vouchers, Medicaid, federal stimulus checks and tax credits—the FGA calculated potential benefits reaching as high as \$5,311 per month, or nearly \$64,000 annually.⁷ Similarly, the Alaska Policy Forum calculated the total possible benefits for a similar family equivalent to more than \$68,000 per year in Alaska.⁸

Consequently, there is an historic, unprecedented mismatch with regards to slack in the labor market. Stated in simple terms, the enhanced benefits have created a secondary pandemic of countless job openings that outnumber unemployment. With incentives to stay home, coupled with approximately equal or even higher wages for the unemployed, employers are having a difficult time enticing workers to come back, prompting governors across the U.S. to try their own strategies.

“ *As we emerge from Covid-19, retail and service companies, restaurants and industry are attempting to return to pre-pandemic employment levels, but employees are as scarce today as jobs were a year ago.*

– Arkansas Governor Asa Hutchinson ”

6. <https://thefga.org/paper/florida-unemployment-boost-pay-better-than-returning-to-work/>

7. *Ibid.*

8. <https://alaskapolicyforum.org/2021/05/alaska-should-reject-a-state-ui-bonus/>

Several governors recognized the magnitude of these policy-induced disincentives to work and quickly ended bonus unemployment payments in their states. In order to incentivize the workforce in their respective states, 26 governors ceased participation in the \$300 weekly enhancement sometime over the summer of 2021. Moreover, 22 states (listed in the table below) announced that they planned to stop subsidizing unemployed workers an extra \$300 in benefits at various points in June.⁹

“ *What was intended to be a short-term financial assistance for the vulnerable and displaced during the height of the pandemic has turned into a dangerous federal entitlement, incentivizing and paying workers to stay at home rather than encouraging them to return to the workplace.*

– *South Carolina Governor Henry McMaster* ”

TABLE 7: STATES ENDING INCREASED AND EXPANDED UNEMPLOYMENT BENEFITS*

| State | End Date | State | End Date |
|-------------|-----------|----------------|-----------|
| Alabama | 6/19/2021 | Nebraska | 6/19/2021 |
| Alaska | 6/12/2021 | New Hampshire | 6/19/2021 |
| Arkansas | 6/26/2021 | North Dakota | 6/19/2021 |
| Florida | 6/26/2021 | Ohio | 6/26/2021 |
| Georgia | 6/26/2021 | Oklahoma | 6/27/2021 |
| Idaho | 6/19/2021 | South Carolina | 6/30/2021 |
| Iowa | 6/12/2021 | South Dakota | 6/26/2021 |
| Mississippi | 6/12/2021 | Texas | 6/26/2021 |
| Missouri | 6/12/2021 | Utah | 6/26/2021 |
| Montana | 6/27/2021 | West Virginia | 6/19/2021 |
| | | Wyoming | 6/19/2021 |

*Some governors ended increased and expanded unemployment benefits early, but litigation kept the benefits in effect until September of 2021.

Four Governors, rather than end participation, are instead using federal funds to provide back-to-work bonuses for workers. Arizona Governor Ducey is providing a \$2,000 back-to-work bonus; Montana Governor Gianforte a \$1,200 bonus; Oklahoma Governor Stitt a \$1,200 bonus for the first 20,000 laid-off workers who are rehired; and New Hampshire Governor Sununu, for those who work full-time for eight weeks, is providing up to \$1,000, while part-time workers could receive up to \$500.¹⁰

10. <https://www.foxbusiness.com/economy/states-return-to-work-bonus-hiring-slowdown>

The logo features a circular graphic composed of several colored segments (red, orange, yellow, green, blue, purple) arranged in a ring. The words "FISCAL POLICY" are written in a bold, white, sans-serif font across the center of the ring.

FISCAL POLICY

CONCLUSION

The Fiscal Policy grades differ in application and measurement compared to Economic Performance. While Economic Performance rankings measure a more concrete sense of economic progress in each governor's state, Fiscal Policy rankings provide an explanation of how performance metrics were achieved as well as the direction in which those metrics are expected to move from a theoretical approach. As for measurability, Fiscal Policy rankings are much more effective in isolating discretionary actions of the state executives when compared to Economic Performance. Governors may struggle to expand their economies due to immutable state qualities and characteristics, however, they are fully capable of creating their own fiscal policy agendas. Governors may be limited by a state legislature standing in opposition to sound policy changes, however, with the rankings inclusion of the governors' stances on what fiscal policy ought to be, there is no reason a governor would be unable to earn a respectable Fiscal Policy rank. Within these rankings, the governors are responsible for their rankings. The highest ranked governors are deserving of praise, and those trailing have the unrestrained ability, and the responsibility, to reverse course.

CHAPTER

3

EXECUTIVE POLICY

EXECUTIVE POLICY

EXECUTIVE POLICY

In an economically free society, the primary role of government is to protect individuals and their property from interference by others. It is also the government's responsibility to protect property rights, defend liberty and promote the character necessary to legitimize such a government.

The policy decisions a governor makes throughout their term, known in this report as Executive Policy, will have a long-term impact on a state's economic performance.

More often than not, excessive state rules and regulations tend to limit rather than expand individual freedom. Laws and mandates, even with the intention of protecting individuals from harm, can be detrimental to individual rights and freedoms. Some laws are written to protect government monopolies for the sake of price stability. Other laws simply attempt to redistribute wealth to promote notions of equity, which essentially expands the government's influence on the economy. The purpose of these edicts is often not to increase state tax revenue for public programs but to signal virtue on behalf of lawmakers.

A state government's responsibility to its citizenry is to operate effectively by collecting tax revenue from economic activity while also avoiding the negative impacts of taxation. The solution is not as simple as the arithmetic effect (raising tax rates), just as doubling the price of a product does not double profit. Instead, the dynamic economic effects of tax rate increases must also be considered. When the private sector flourishes and business activity increases, state tax revenue increases as well because the tax base grows. On the flip side, businesses face major headwinds to growth when taxes and regulations impede investment, which may shrink the tax base over the long run. In summary, a state's private economy cannot flourish with tremendous government imposition on property rights, individuals and businesses engaged in voluntary transactions.

In the 2020 edition of the Laffer-ALEC Report on Economic Freedom, a governor's response to COVID-19 was a significant policy concern. Because most states have opened their economies, this year's rankings are less dependent on COVID responses. This 2021 edition of the report continues to monitor states' education freedoms, resistance to welfare dependency and union control policies. These policies impact a state's fiscal and economic health—summarized in an Executive Policy ranking. Also, the Executive Policy grade rewards governors who have removed barriers to employment such as onerous occupational licensing requirements.

EDUCATION FREEDOM

Education freedom is defined as the availability of student-centered education. One silver lining from pandemic shutdowns has been a growing number of states pushing innovative school choice policies forward such as education savings accounts, private or charter school options and scholarships to low-income and disabled students. The COVID-19 pandemic opened many parents' eyes to flaws within the traditional public school system. No longer complacent with the status quo, new and different educational possibilities are now on the table. As parents viewed their children's education from home, eyes were opened to materials and values espoused in public schools while recognizing the value of personalized instruction available outside the standard classroom setting. In the Virginia gubernatorial race, for instance, former Governor Terry McAuliffe angered many parents by stating, "I don't think parents should be telling schools what they should teach."¹ The former governor doubled down, saying, "I'm not going to let parents come into schools and actually take books out and make their own decision." Many concerned parents responded on Election Day by delivering a victory to Republican Glenn Youngkin, who campaigned on the importance of parental rights in education.

Arizona, Florida and Indiana have had school choice programs for years and are continuously expanding options for parents. Vouchers and tax credit scholarship programs have been the traditional vehicles for school choice. This year Arkansas, Florida, Georgia, Indiana, Iowa, Kansas, Maryland, Montana, New Hampshire, Oklahoma and South Dakota started or expanded such programs.

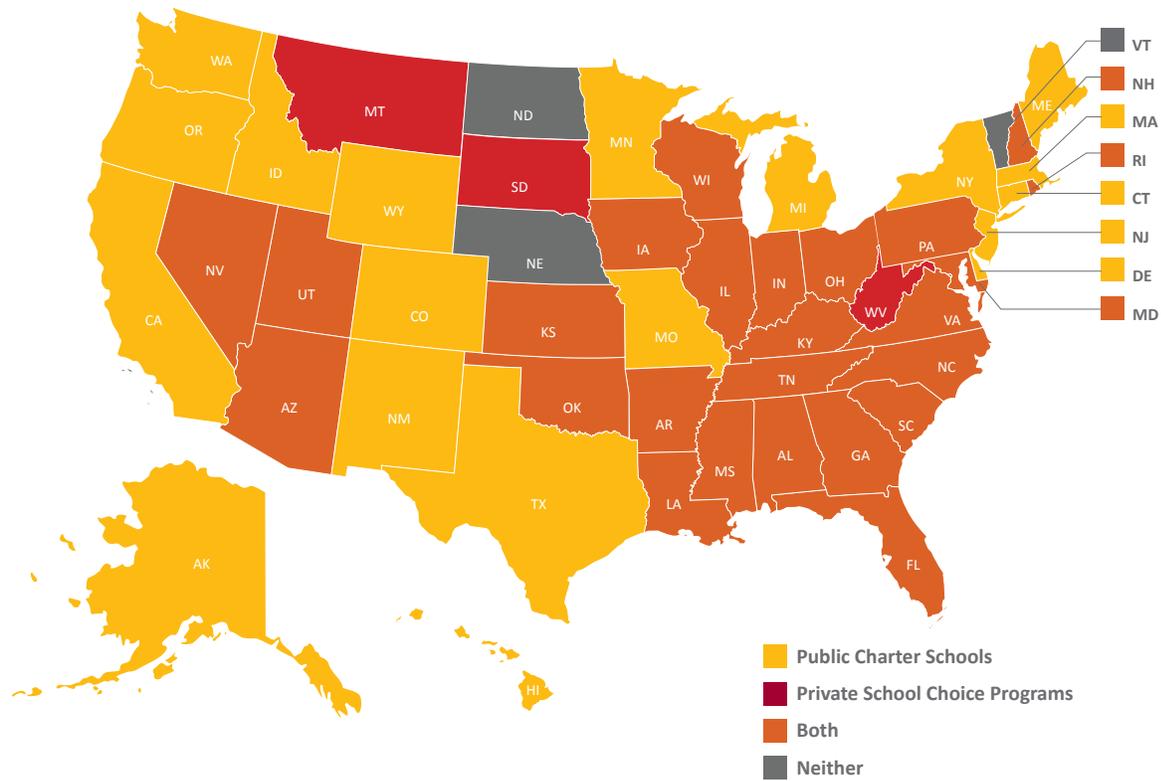

Educational Savings Accounts (ESAs) are the newest school choice instrument and provide tremendous flexibility to parents, upending the traditional school funding model. Traditionally, tax dollars fund school districts, and district administrators decide how to spend those funds. Conversely, with ESAs, the funding follows the children, and parents decide how to spend the money from their own accounts. Indiana, West Virginia, Kentucky and Missouri have passed new education savings account bills. West Virginia's new ESA bill, spearheaded by ALEC Board of Directors member, Senator Patricia Rucker, will provide the broadest eligibility of school choice in the nation.

EXECUTIVE POLICY

FIGURE 4: STATES WITH SCHOOL CHOICE OPTIONS

Education freedom is defined, in part, as having schools open to students whose parents choose for them to be in a classroom. The rankings focus primarily on the degree to which parents have the freedom to choose if that classroom is in a charter or magnet school and if their child is required to wear a mask. While some governors leave school openings up to districts,¹⁴ states require in-person instruction to be available in some or all K-12 grades. Eight states have mandated full-time, in-person learning for the 2021-2022 school year, and 32 have left the decision up to local school districts.

FIRST IN EDUCATION FREEDOM GOVERNORS

The top scoring governors in education freedom have expanded school choice options, opened schools for in-person K-12 education and promoted education policies that place discretion in the hands of parents. In brief, highly ranked governors in this category transfer freedom of education from bureaucracy to parents.

FLORIDA GOVERNOR RON DESANTIS

In May of 2021, Governor DeSantis signed into law legislation that vastly expands Florida's need-based and special needs scholarships so more children will have access to educational options. These programs ensure parents will have the opportunity in future years to provide the very best educational options for their children. Beginning in the fall of 2021, disenfranchised families who may be awaiting a scholarship have the chance to enroll their child in a school of their choice.

"This legislation creates historical levels of flexibility in both schooling and educational services for millions of low-income families and families of students with unique abilities. There will be more opportunities for families and more children throughout the state of Florida as a result of this legislation. That is a good thing."

– Governor DeSantis.

IOWA GOVERNOR KIM REYNOLDS

Governor Reynolds signed a proclamation in July 2021 which ordered schools to reopen in the fall. School districts and local health departments have the authority to move certain students or classrooms to remote learning. However, they will not have the authority to make the transition for an entire school. Children would be allowed to receive remote learning with parental consent.

"While we all know the school year will be different than it's ever been before, it's critical that we prioritize bringing Iowa's children back to the classrooms safely and responsibly."

– Governor Reynolds

EXECUTIVE POLICY

WELFARE DEPENDENCY

While all welfare or transfer programs are designed with the intention to grant recipients a temporary safety-net, some function as a life-long dependency network in practice. Welfare reform in the 1990s under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 revised federal standards for states' welfare programs. Following its passage, states have been required to provide welfare programs that assist with work, education, job training and job search. The reform was a limited term program with funding for work programs and support for parents with child-care and health care. Some states have not kept pace with these goals, effectively establishing a dependency for those receiving relief from state programs.

In addition, the government funded health care program for low-income individuals, known as Medicaid, has grown far faster than the speed of the economy. The program has expanded, rather than contracted eligibility for enrollment. The Affordable Care Act provided funding for Medicaid expansion to nontraditional populations, such as childless, able-bodied adults who earn up to 138% of the federal poverty level. States' only tools are to reject the expansion completely, carefully monitor utilization and eligibility of the programs and provide reimbursements. For those states that chose to expand their Medicaid program, federal funding was at 100% until 2017 when it dropped to 95%, and it continued to drop in 2020 to 90%.² With the passage of the American Rescue Plan Act (ARPA), federal funding temporarily rose back to 95%. There is no guarantee that federal funding will stay at that level in the future. States that have expanded their Medicaid promises assume a big risk that they may wind up having to come up with a bigger share of state tax funding in the years to come.

A governor's rating on welfare dependency is based on welfare and Medicaid spending over a governor's term, relative to the size of the state's economy.

The states with the lowest welfare spending have several common policies. Temporary Assistance for Needy Families (TANF) spending in the best ranked states is significantly lower than in the lowest ranked states, indicating minimal dependence on federal public assistance funding. The best ranked states also have the smallest percentage of their populations enrolled in the Medicaid program. Medicaid spending per enrollee in the best ranked states is lower than most states, and many had not expanded Medicaid under Obamacare, at least until recently. Future rankings for South Dakota and Utah, the best ranked states in Welfare Dependency, are in jeopardy due to recent ballot initiatives to expand Medicaid.

In November 2020, South Dakota's Secretary of State approved two 2022 Medicaid expansion ballot initiative petitions for circulation, filed by the organizing committee Dakotans for Health. One

TABLE 8: WELFARE DEPENDENCY RANKINGS

| Rank | Governor | State |
|------|------------------|----------------|
| 1 | Kristi Noem | South Dakota |
| 2 | Spencer Cox | Utah |
| 3 | Mark Gordon | Wyoming |
| 3 | Ralph Northam | Virginia |
| 5 | Steve Sisolak | Nevada |
| 6 | Greg Abbott | Texas |
| 6 | Pete Ricketts | Nebraska |
| 8 | Brian Kemp | Georgia |
| 9 | Doug Burgum | North Dakota |
| 10 | Kevin Stitt | Oklahoma |
| 11 | Bill Lee | Tennessee |
| 12 | Laura Kelly | Kansas |
| 13 | Ron DeSantis | Florida |
| 14 | Brad Little | Idaho |
| 15 | Jared Polis | Colorado |
| 16 | Roy Cooper | North Carolina |
| 17 | Henry McMaster | South Carolina |
| 18 | Kim Reynolds | Iowa |
| 19 | Kay Ivey | Alabama |
| 19 | Chris Sununu | New Hampshire |
| 21 | J.B. Pritzker | Illinois |
| 22 | Mike Parson | Missouri |
| 23 | Jay Inslee | Washington |
| 23 | Tate Reeves | Mississippi |
| 25 | John Bel Edwards | Louisiana |

| Rank | Governor | State |
|------|------------------------|---------------|
| 25 | Larry Hogan | Maryland |
| 27 | Tony Evers | Wisconsin |
| 27 | Eric Holcomb | Indiana |
| 29 | Doug Ducey | Arizona |
| 29 | Phil Murphy | New Jersey |
| 31 | John Carney | Delaware |
| 31 | David Ige | Hawaii |
| 33 | Tim Walz | Minnesota |
| 34 | Kate Brown | Oregon |
| 35 | Ned Lamont | Connecticut |
| 36 | Tom Wolf | Pennsylvania |
| 37 | Asa Hutchinson | Arkansas |
| 38 | Mike Dunleavy | Alaska |
| 38 | Gavin Newsom | California |
| 40 | Charlie Baker | Massachusetts |
| 41 | Mike DeWine | Ohio |
| 42 | Andy Beshear | Kentucky |
| 42 | Janet Mills | Maine |
| 44 | Gretchen Whitmer | Michigan |
| 45 | Jim Justice | West Virginia |
| 46 | Daniel McKee | Rhode Island |
| 47 | Andrew Cuomo | New York |
| 48 | Phil Scott | Vermont |
| 49 | Michelle Lujan Grisham | New Mexico |
| NR* | Greg Gianforte | Montana |

*Not ranked. See methodology.

is a constitutional amendment, and the other is an initiated state statute. Separately, the organizing committee, South Dakotans Decide Healthcare, filed two similar petitions for the 2022 ballot in February 2021. Included was an initiated constitutional amendment subsequently approved for circulation on March 25, 2021.

In Utah, Medicaid coverage under the expansion began on January 1, 2020. Following a successful Medicaid expansion ballot measure in November 2018, the state legislature took steps to roll back the full expansion by directing the state to submit a series of waivers. On December 23, 2019, the Centers for Medicare and Medicaid Services (CMS) approved certain provisions in the state's "Fallback Plan" waiver request to amend its Primary Care Network Waiver which would expand Medicaid eligibility; the approval also included work requirements for the newly expanded adult Medicaid population. In February 2021, the Biden Administration began to withdraw waivers to states with work requirement provisions.

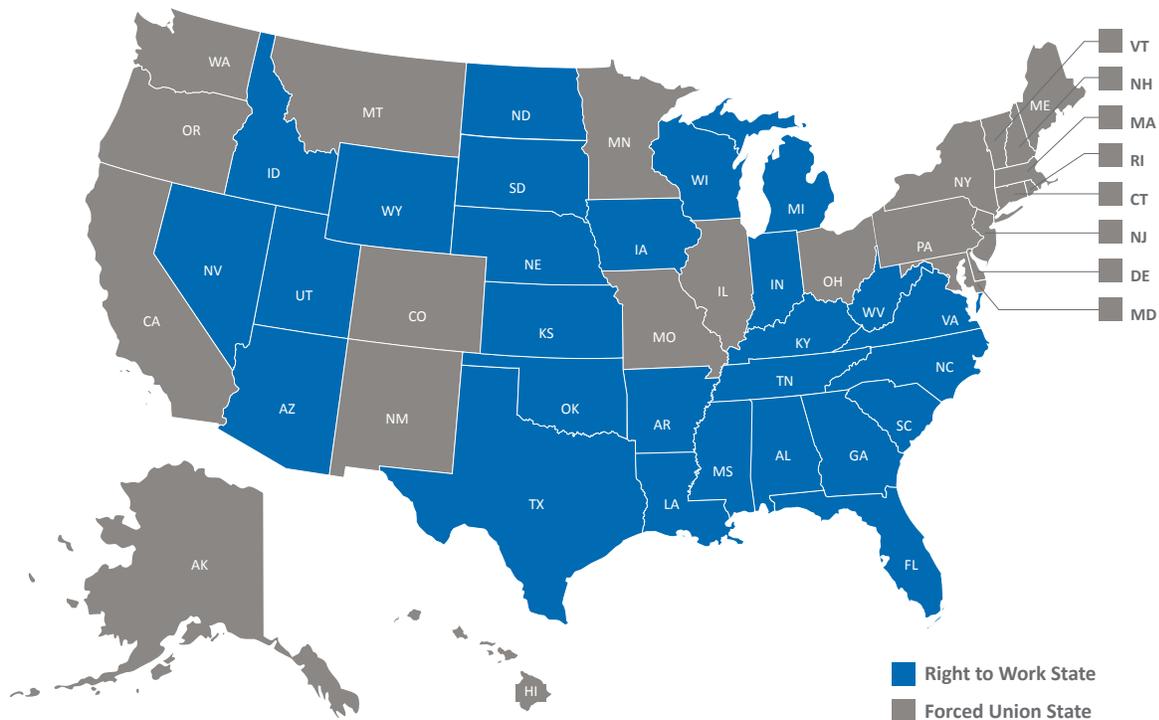

EXECUTIVE POLICY

UNION CONTROL

States with unaffordable governments, and therefore fiscal problems and ever-increasing tax burdens, often have high levels of union-controlled costs. Public sector unions appear to operate in a similar manner to their private counterparts. However, neither party in a public sector labor negotiation generates revenue; they are solely funded by taxpayer dollars. It's not a zero-sum game in which management sacrifices their gains for the benefit of the employee. Any benefits for union members derived from these negotiations come from higher tax burdens for state income earners, or loss in the government's efficiency. In any case, greater public sector union influence is a greater detriment to the state residents, leading to wasteful spending practices and ultimately fiscal crises through massive, unfunded pension and health care and other post-employment obligations. State government union membership directly affects state expenditures.

In addition, private sector employees' right to work without being controlled by a union improves a state's economic health. Employment is nothing more than a contract between an employee and an employer. Both parties negotiate wages, benefits and working conditions, all while neither is coerced to accept or decline the offer at hand. Forced union membership eliminates a private individual's ability to make personal decisions. Without the ability to freely negotiate one's own unique conditions for work, efficiency is lost on a macro-scale.

FIGURE 5: RIGHT TO WORK STATES IN 2021

Source: Rich States, Poor States 14th Edition

BARRIERS TO WORK

In the 1950's, five percent of workers needed an occupational license to work. Today, it is one in three workers. Licensing requirements vary by state and are burdensome for all workers, especially low-income entrants to the marketplace. Another silver lining to the pandemic shut down has been a movement to reform licensing laws in several states. The Executive Policy rankings rewards positive licensing reforms. Nine states advanced reforms in 2021. Florida, Kansas and Mississippi enacted universal reforms while Utah's governor signed an executive order to require review of all licenses. These universal reforms closely follow ALEC's "Model Interstate-Mobility and Universal Recognition Occupational Licensing Act,"³ and the Utah executive order follows the concepts found in ALEC's "Occupational Licensing Review Act."⁴

MEDICAL PRICE TRANSPARENCY

At present, the U.S. healthcare system has a major market failure disrupting the marketplace: asymmetric information. In order for markets to function efficiently, market failures need to be minimized. Of course, we know it is extremely difficult to fully eliminate market failures, but we can play a role in reducing their effects. To understand the gravity of this imperfection, imagine, for example, you've been having back pain for several weeks and decide to go visit your doctor. Following an examination, your doctor describes (in medical jargon usually only understood by medical professionals) that you have what is known as disc degeneration, and there are three treatment options: self-guided physical therapy, professionally-guided physical therapy, or surgery. Naturally, a rational consumer would want to know the quality and cost of each of the treatment options in order to make a decision. Unfortunately, your doctor will tell you the cost depends on a variety of factors, and the quality of each type of treatment is difficult to quantify. More than likely, your doctor will recommend a treatment plan, and you will oblige because your doctor has a medical degree, and you do not. In this transaction, the supplier (your doctor) holds all the information, and the demander (you) is left holding the bag. This is not an acceptable transaction process in any other industry. Why should the medical field be the exception?

President Biden signed an executive order in July 2021 directing the department of Health and Human Services (HHS) to continue enforcing the "price transparency initiatives for hospitals, other providers and insurers" that were put in place by the Trump Administration. The transparency rules aim to increase competition in the healthcare marketplace by allowing consumers to make an informed decision about the quality and cost of their medical care.

4. <https://alec.org/model-policy/occupational-licensing-review-act-formerly-part-of-occupational-board-reform-model-act/>

EXECUTIVE POLICY

The Trump-era rules called for regulations requiring medical charges and rates to be reported “in an easy to understand, consumer-friendly and machine-readable format.” ALEC maintains model policy on health care price disclosures, and Florida, Colorado and New York have embraced transparency, providing mechanisms to make it more useful and consumer friendly.⁵

“*People deserve to know what they are being charged for hospital services. In Colorado, we have made important strides to improve hospital transparency and help save consumers money so it’s terrific to see the Biden Administration follow our lead and to have a federal administration focused on driving down costs for consumers. I was proud that one of the first bills I signed as Governor to improve hospital transparency in Colorado and determine the true cost of care, and there is more work to be done.*”

– Governor Polis ”

GOVERNORS ON THE MOVE

GOVERNORS ON THE MOVE

GOVERNORS ON THE MOVE

The 2021 Laffer-ALEC Report on Economic Freedom: Grading America's Governors is the second annual assessment of state executives. States are the incubators of competition and innovation in large part because of the numerous and varied policy priorities of the governors. These rankings aim to provide clear and usable evidence that a governor has pursued a proven, pro-growth economic agenda to foster prosperity for his or her state.

The hope is that governors will find widespread success and prosperity, regardless of their party affiliation. The rankings show successful governors, as well as those failing to meet expectations, belonging to both parties. Overall, America's Democrat governors lagged far behind their Republican counterparts in this year's report. However, rankings among the Democrat governors have improved slightly this year, with one earning a five-star, top 10 ranking, and another being ranked in the top 20. Republican governors held 9 of the top 10 spots and earned themselves varying degrees of praise and criticism within the rankings. There were six Republican governors who earned two stars, and three Republican governors with three stars in the 2021 results.

Compared to the 2020 Laffer-ALEC Report on Economic Freedom: Grading America's Governors, some governors have moved up in the rankings, while others have lost ground to their peers. Due to the ordinal nature of the rankings, any one governor's movement through the ranks is dependent upon the performance of 49 other governors in addition to their own performance. Movement across ranks from year to year does not necessarily translate to a decline or improvement in the Key Performance Indicators, though in certain instances it may. Instead, movement in rank typically reflects an improvement or decline with respect to other governors.

The first edition of the report captured the governor's economic responses to COVID-19, which led to economic disruptions and high unemployment rates. Moving into 2021, rankings reflect various amounts of continued COVID-19 disruption. An important change from the 2020 report is that the 2021 report measures a governor by the policies and performance over their term in office, rather than annually. The change, in most cases, allows for a larger sample size in determining the efficacy of each governor. Notable policy changes that drove improvement following the rankings include income tax reductions in Arizona, Colorado, Idaho, Montana and West Virginia, and the expansion of education freedom in Arizona, Iowa, Mississippi and West Virginia.

Competition among four and five-star governors remains strong. Eight of the 10 five-star governors in 2020 remain five-star governors in this report. Four and five-star governors should be encouraged to continually improve because there are many terrific governors who continue to improve.

TABLE 9: 5-STAR GOVERNORS

| Overall Rank | Governor | State | Executive Policy Rank | Economic Performance Rank | Fiscal Policy Rank |
|--------------|--------------|---------------|-----------------------|---------------------------|--------------------|
| 1 | Kristi Noem | South Dakota | 2 | 3 | 3 |
| 2 | Spencer Cox | Utah | 1 | 2 | 7 |
| 3 | Ron DeSantis | Florida | 10 | 5 | 1 |
| 4 | Jared Polis | Colorado | 7 | 4 | 11 |
| 5 | Brad Little | Idaho | 16 | 1 | 7 |
| 6 | Bill Lee | Tennessee | 3 | 17 | 5 |
| 7 | Chris Sununu | New Hampshire | 13 | 11 | 6 |
| 8 | Doug Ducey | Arizona | 9 | 20 | 4 |
| 9 | Brian Kemp | Georgia | 13 | 14 | 9 |
| 10 | Greg Abbott | Texas | 5 | 27 | 10 |

Each of the five-star governors earned outstanding Fiscal Policy ranks in this report. Governor Ron DeSantis (FL) had the highest Fiscal Policy rank, and only Governor Jared Polis (CO) fell out of the top 10 in Fiscal Policy. The five-star governors have a good track record of keeping government spending and debt under control, all while pushing for personal and corporate income tax reform. In addition, seven of these 10 governors ended expanded and increased unemployment benefits in June of 2021. The five-star governors also performed well in the Executive Policy rankings. Governor Spencer Cox (UT) ranked highest in Executive Policy. Only three governors fell out of the top 10 in the Executive Policy rankings, but none fell out of the top 20. Economic Performance rankings were a mixed bag. The top five governors each placed in the top five for Economic Performance. Governor Brad Little (ID) ranked 1st in Economic Performance. The remainder of the five-star governors each ranked outside of the top 10 in Economic Performance. Each of these governors' states are in varying stages of recovery from economic disruptions caused by the government response to the COVID-19 pandemic. Therefore, their Economic Performance ranks are greatly affected by the impact of the pandemic in their states.

GOVERNORS ON THE MOVE

TABLE 10: 4-STAR GOVERNORS

| Overall Rank | Governor | State | Executive Policy Rank | Economic Performance Rank | Fiscal Policy Rank |
|--------------|----------------|----------------|-----------------------|---------------------------|--------------------|
| 11 | Pete Ricketts | Nebraska | 24 | 8 | 12 |
| 12 | Mike Parson | Missouri | 15 | 27 | 2 |
| 13 | Kim Reynolds | Iowa | 8 | 25 | 14 |
| 14 | Doug Burgum | North Dakota | 6 | 19 | 26 |
| 15 | Henry McMaster | South Carolina | 19 | 15 | 19 |
| 16 | Kevin Stitt | Oklahoma | 3 | 32 | 18 |
| 17 | Mark Gordon | Wyoming | 10 | 29 | 17 |
| 18 | Steve Sisolak | Nevada | 20 | 22 | 16 |
| 19 | Eric Holcomb | Indiana | 23 | 23 | 13 |
| 20 | Greg Gianforte | Montana | 22 | 7 | 32 |

Four-star governors have competitive policy grades but fall just behind five-star governors. All but two governors fall in the top 20 for Fiscal Policy rankings, with Governor Mike Parson (MO) being ranked 2nd. Governor Greg Gianforte (MT), who was inaugurated in 2021, put an income tax reduction plan in place in his first legislative session and has already improved from his predecessor's rank. Improvement in Education Quality will be necessary for this group of governors to improve their rankings, and several of them are making strides in to do so. Governor Mike Parson, Governor Kim Reynolds (IA), Governor Kevin Stitt (OK) and Governor Eric Holcomb (IN) have expanded school choice opportunities, which has benefitted their Education Freedom rankings, but will also benefit their future Education Quality ranks.

TABLE 11: 3-STAR GOVERNORS

| Overall Rank | Governor | State | Executive Policy Rank | Economic Performance Rank | Fiscal Policy Rank |
|--------------|----------------|----------------|-----------------------|---------------------------|--------------------|
| 21 | Jay Inslee | Washington | 32 | 9 | 21 |
| 22 | Roy Cooper | North Carolina | 28 | 16 | 20 |
| 23 | Asa Hutchinson | Arkansas | 12 | 38 | 15 |
| 24 | Ralph Northam | Virginia | 29 | 11 | 27 |
| 25 | Andy Beshear | Kentucky | 25 | 10 | 35 |
| 26 | Tate Reeves | Mississippi | 26 | 21 | 25 |
| 27 | Laura Kelly | Kansas | 17 | 31 | 28 |
| 28 | Kay Ivey | Alabama | 21 | 32 | 24 |
| 29 | Janet Mills | Maine | 38 | 6 | 37 |
| 30 | Tony Evers | Wisconsin | 31 | 24 | 33 |

Three-star governors appear to be stuck in the middle. They have the opportunity to improve their rankings by following the policies of those with higher rankings. Mississippi's Governor Tate Reeves, inaugurated last year, is working with the Mississippi Legislature to reduce or eliminate state income taxes. Following in the footsteps of his predecessor, he has also worked with the legislature to expand education freedom for Mississippi students. Wisconsin Governor Tony Evers signed a bill reducing his state's second highest income tax rate.

GOVERNORS ON THE MOVE

TABLE 12: 2-STAR GOVERNORS

| Overall Rank | Governor | State | Executive Policy Rank | Economic Performance Rank | Fiscal Policy Rank |
|--------------|------------------|---------------|-----------------------|---------------------------|--------------------|
| 31 | Tim Walz | Minnesota | 37 | 13 | 40 |
| 32 | Mike DeWine | Ohio | 34 | 35 | 22 |
| 33 | Jim Justice | West Virginia | 18 | 47 | 30 |
| 34 | Phil Scott | Vermont | 30 | 30 | 39 |
| 35 | Larry Hogan | Maryland | 35 | 39 | 29 |
| 36 | John Bel Edwards | Louisiana | 33 | 50 | 23 |
| 37 | Mike Dunleavy | Alaska | 26 | 49 | 34 |
| 38 | John Carney | Delaware | 41 | 34 | 36 |
| 39 | Charlie Baker | Massachusetts | 44 | 25 | 42 |
| 40 | Kate Brown | Oregon | 46 | 17 | 50 |

The two-star governors face significant challenges. A few are taking these challenges head-on. Ohio Governor Mike DeWine has reduced income taxes. West Virginia Governor Jim Justice has significantly expanded school choice. He has also proposed eliminating the income tax and is committed to convincing the legislature to pass his tax plan. Governor Larry Hogan (MD) expanded school choice opportunities. Governor John Bel Edwards (LA) joined Republican governors in ending federal unemployment enhanced benefits prior to the federal expiration.

TABLE 13: 1-STAR GOVERNORS

| Overall Rank | Governor | State | Executive Policy Rank | Economic Performance Rank | Fiscal Policy Rank |
|--------------|-----------------------|--------------|-----------------------|---------------------------|--------------------|
| 41 | Gretchen Whitmer | Michigan | 39 | 44 | 31 |
| 42 | Ned Lamont | Connecticut | 42 | 36 | 44 |
| 43 | Tom Wolf | Pennsylvania | 40 | 42 | 43 |
| 44 | David Ige | Hawaii | 45 | 37 | 45 |
| 45 | Phil Murphy | New Jersey | 43 | 40 | 45 |
| 46 | Andrew Cuomo | New York | 47 | 45 | 38 |
| 47 | J.B. Pritzker | Illinois | 36 | 48 | 47 |
| 48 | Gavin Newsom | California | 48 | 43 | 41 |
| 49 | Daniel McKee | Rhode Island | 50 | 41 | 49 |
| 50 | Michell Lujan Grisham | New Mexico | 49 | 46 | 48 |

One-star governors mostly struggled to advance in 2021; seven of the 10 were one-star governors in the 2020 Laffer-ALEC Report on Economic Freedom: Grading America's Governors. Fiscal Policy rankings are abysmal among this group. Only two of the one-star governors (Michigan Governor Gretchen Whitmer and former New York Governor Andrew Cuomo) ranked above the bottom 10 in the Fiscal Policy. Similarly, only three of the one-star governors (Governor Whitmer, Pennsylvania Governor Tom Wolf and Illinois Governor J.B. Pritzker) ranked above the bottom 10 in Executive Policy. It is hard to deny that the fiscal and executive policies of this group have impacted the factors that compose the Economic Performance grade. All but three of these governors (Connecticut Governor Ned Lamont, Hawaii Governor David Ige and New Jersey Governor Phil Murphy) ranked in the bottom 10 in Economic Performance. The hope is that next year's publication will show improvements for each of these governors, not just in overall ranking but in the Economic Performance, Executive Policy and Fiscal Policy rankings as well.

CHAPTER

5

METHODOLOGY

METHODOLOGY

THE 2021 LAFFER-ALEC REPORT ON ECONOMIC FREEDOM: GRADING AMERICA'S 50 GOVERNORS

States have long been incubators of policy innovation, even in times when the Tenth Amendment has become an afterthought of the federal government. The “Laboratories of Democracy” concept is never more necessary or apparent than in times of national crisis. Governors, even those overseeing historically disadvantaged states or cooperating with unwilling legislatures, have numerous tools at hand, including the power to propose positive economic policies, veto poor ones and exercise the power of the podium. Governors’ efforts to effectuate those policies have proven to improve the economic health of a state, the fiscal health of its government and the freedom of its citizens to pursue prosperity for themselves and the community at-large.

The *2021 Laffer-ALEC Report on Economic Freedom: Grading America’s 50 Governors* assigns multiple rankings, subdivided into multiple metric categories, to each of our nation’s governors. All of these overarching categorical rankings are then combined to compute an overall ranking of 1 to 50 for each governor. In all cases, a rank of 1 is most preferable and 50 is least preferable. These rankings are the result of sophisticated analyses of each governor’s policies and the context in which each governor operates. Of course, there are many factors that may affect state policy and performance, including state legislatures, municipal officials, and federal policy changes, however, our rankings strive to isolate the actions and policy prescriptions of solely the governor. Throughout the process of ranking each metric with respect to the governor, several calculation methods are employed to control for outside influences. In most cases, state metrics are indexed to national averages to account for trends in U.S. performance, policies are recorded as those proposed by the governors themselves and changes in performance and policy are only measured over the governors’ individual terms. Numerous hard data sources have been compiled and done so with insight into the governor’s term and the unique circumstances related to those years, the government they inherit and the legislatures with which they partner.

As noted, each governor is ranked based upon his or her time in office. For our lieutenant governors who have been promoted to governor, whether it be through a presidential appointment to a cabinet position that has left a seat vacant (RI), or an election in which the lieutenant governor won the governor’s seat (UT), the final term as lieutenant governor is included in our measurement period for rankings. This allows for a more holistic view of a governor’s effect on the state through a larger sample size, granting us more confidence in the precision of the rankings. Due to the short amount of time Governor Greg Gianforte (MT) has been in office, and because he did not serve as lieutenant governor prior to serving as governor, there are some categories in which he has no ranking.

STAR RANKINGS

Consistent with the 2020 edition of this report, governors are ranked 1 (best performer) through 50 (worst performer) and are ranked on a one-to-five-star scale, with five stars being the highest rank, based on the governors’ policies and their economic performance records. Each star-grade is divided into groups of 10 such that ranks 1 through 10 are five-star governors and 41 through 50 are one-star governors.

BEST PERFORMANCE AND HIGHEST ACHIEVEMENT

The *2021 Laffer-ALEC Report on Economic Freedom: Grading America’s 50 Governors* ranks each governor on their current economic performance and their fiscal and executive policies over their term in office. Governors who were inaugurated into high performing states and continue positive policies may not

be able to improve as much as others but receive credit for their positive performance. We believe that to those whom much is given, much is expected. Governors who are inaugurated into poor performing states and improve or try to improve their policies receive high policy rankings. Those who continue those policies receive low ranks for both policies and performance. Newer governors who do not have long track records to measure are ranked only on the data that is relevant to their policies since taking office. In the case of a new governor who served together with the prior governor, we look at the track record over their most recent term of influence as lieutenant governor.

KEY PERFORMANCE INDICATORS (KPI'S)

Governors are ranked on three Key Performance Indicators: Economic Performance, Fiscal Policy and Executive Policy, based on current performance and change over their terms. Each of these KPI's is then combined with equal weight to calculate an overall rank for each governor.

 **EXECUTIVE POLICIES** are those policy decisions a governor makes each year that will have a long-term impact on a state's economic performance. There are numerous government policies that could be included in this category; however, this report uses a sample of those that are meaningful and measurable. A governor's Executive Policy rank is based on the balance of government and personal control and dependency. School choice availability is an example of government versus parental control of a child's education and an indicator of future economic performance related to long-term educational attainment for children in any state. Executive Policy is empirically measured by the following but may also reflect a governor's policy priorities:

UNION CONTROL:¹ Labor union control over state employment is measured through total employees within each state that are represented by unions as well as each state's right-to-work status. Change in union membership in a state over a governor's term, change in state government employment relative to state population and right-to-work policy are combined to create union control grades for each governor that are then ranked accordingly.

EDUCATION FREEDOM:² This is a measure of the availability of school choice options for parents, including the availability of in-person schooling in the fall of 2021 free from state mandates. Several measures, such as in-person learning options, charter school option and voucher availability, were combined to generate a rank for education freedom. For our purposes, we use the term "freedom" with respect to the perspective of parents, not from the perspective of local school administrators, teachers' unions, etc.

WELFARE DEPENDENCY:³ Welfare spending for each state is calculated as combined Medicaid spending and Temporary Assistance for Needy Families (TANF) spending. Transfer payments intended for minors are not included within these aggregations seeing as those funding levels have little to no impact on state employment. Excluded spending categories include Children's Health Insurance Program (CHIP) funding, several line items within social security funding for the disabled and administrative funding for those efforts. Governors are ranked based upon funding levels throughout each of their terms with favorable rankings assigned to those with the least spending as a share of Gross State Product (GSP).

3. data.medicaid.gov

METHODOLOGY

 **ECONOMIC PERFORMANCE** measures the economic performance of the state under each governor’s leadership and is based on empirical data. These metrics are objective in nature, meaning there is little to no debate as to which performance results rank more favorably than others. Economic Performance ranks consist of the following variables:

 **INTERSTATE MIGRATION:** In short, this measure is a calculation of net in-migration with several adjustments. Net in-migration is computed for each state as total in-migration minus total out-migration, with both series provided by the U.S. Census Bureau.⁴ We then adjust the data for each state’s population level by calculating net in-migration divided by the square root of the product of state population and the U.S. population minus the state population. This process normalizes our migration statistics, adjusting for drastic swings in net in-migration that would otherwise accompany states with less massive populations. We then measure the change in our correctly normalized variable over each governor’s term. The final results are assigned to each governor, excluding Montana due to a lack of data, and ranked from 1 to 50. Governor Gianforte (MT) does not receive a ranking within this category.

 **EDUCATION QUALITY:**⁵ Change in 4th grade reading NAEP scores, as published by the U.S. Department of Education, is measured from the immediate data point before each term to 2019 scores (the most recent available). While we recognize the importance of results in other grade levels or subjects, literacy performance at the 4th grade level acts as a foundation for all other areas of study, extending into the entirety of each students’ education – long after the current governors have left office. The change in these metrics is then measured over each governor’s term. The improvement or decline metrics are then ranked from 1 to 50.

 **GROSS STATE PRODUCT GROWTH:** Average compound quarterly Gross State Product (GSP) growth rates are measured in each state from the first quarter prior to each governor’s term to present. GSP in current dollars is provided by the Bureau of Economic Analysis (BEA).⁶ Each governor’s term-specific compound quarterly growth rates are then indexed to the national GDP growth rates over consistent time periods, to control for instances of national recessions or widespread growth. This allows us to isolate the governors’ impacts to their states and rank their measurable deviations from the U.S. trend.

 **UNEMPLOYMENT RATE:** This metric is measured, like all others within the Economic Performance KPI, solely throughout each governor’s total time in office. State unemployment rate data is distributed on a monthly basis by the Bureau of Labor Statistics (BLS).⁷ State unemployment rates are indexed by U.S. unemployment rate which displays an unemployment rate for each state that is above or below the national average. All monthly values for each governor’s term are arithmetically averaged to compute our ranking metric. The average state unemployment rates relative to U.S. unemployment rates are then ranked accordingly. Several adjustments are made to states to adjust for unequal impacts of major events including, but not limited to, industry-specific shocks, pandemic-derived shifts and federal policy changes.

 **FISCAL POLICY** ranks the fiscal policy decisions a governor makes each year that have a direct impact on economic performance, and are based on underlying empirical outcomes, but also the policies that are intrinsic to that governor, even if the governor has not yet achieved success. Fiscal Policy is empirically measured by the following but may also reflect a governor's policy priorities.

 **DEBT:** This metric is inclusive of all types of state debt. We combine standard reported debt levels from the Census Bureau's State and Local Finances report⁸ and each state's total pension unfunded liability. This metric is ranked based upon change in total debt and change in relative pension funded ratio.

 **CORPORATE INCOME TAX:** This metric is calculated in the same manner as our individual income tax rankings. A composite ranking is created based upon current corporate tax rates, proposed corporate tax rates, and changes to corporate tax rates throughout each governor's time in office. The composite score is ranked accordingly.

 **PERSONAL INCOME TAX:** A ranking of the top state personal income tax rates that are currently in effect are combined with a ranking of proposed rates (including staying at zero), rate changes over a governor's term and the magnitude of the change. A composite ranking is then sorted from lowest to highest, granting the governors with the lowest personal income tax rates as well as those who have slashed rates the most favorable scores. For cases in which a governor has opposed rate cuts, through a failed veto or has openly expressed disapproval of lowering tax rates, the governor does not receive a credit for impeding the progress of the pro-growth policies.

 **SPENDING PER CAPITA:** Changes in state spending per capita, provided by the National Association of State Budget Officers (NASBO),⁹ are averaged over a governor's term. Proposed spending described in each governor's budget proposal for fiscal years 2021 and 2022 are included within each governor's measurement period. Spending, both past and proposed, is a measurement of total spending. We do not simply aggregate spending from general funds. All funds, including federal funding via grants and subsidies, are included within total spending. The total spending measures are then adjusted for population size and ranked ordinally, with 1 being the least spending per capita and 50 being the most.

 **FEDERAL UNEMPLOYMENT BENEFITS:** Average Unemployment Insurance benefit is calculated as a share of median family income. Maximum benefits are calculated and annualized in each state for a family of two unemployed adults and two dependents. Over a six-month period, two annualized maximum benefit levels are calculated on a weekly basis, one with enhanced federal benefits and one with standard state maximum benefits. Those two benefit levels are then combined with respect to the governor's acceptance of the federal enhanced benefits. The weighted average benefits are then calculated as a share of each state's median family income to adjust for differences in purchasing power between states. States with the lowest benefit level relative to median family income are ranked most favorably.

ABOUT GOVERNOR KAY IVEY

Kay Ivey (R) is the 54th governor of Alabama, serving since 2017. She graduated from Auburn University with a degree in secondary education. After teaching high school, Ivey worked as a bank officer.

She entered politics in 1979, working for Alabama Gov. Forrest James as an executive assistant for social services and assistant director of the Alabama Development Office. She also worked as a clerk for the Alabama House of Representatives and as a director of government affairs and communications for the Alabama Commission on Higher Education.

Ivey was elected state treasurer in 2002 and re-elected in 2006. She was elected lieutenant governor in 2010 and re-elected in 2014. In 2017, Ivey became governor upon Gov. Robert Bentley's (R) resignation. She was elected to a full term in 2018.

ABOUT GOVERNOR MIKE DUNLEAVY

Mike Dunleavy (R) is the 12th governor of Alaska, serving since 2018. He graduated from Misericordia University with a degree in history and received a master's degree in education from the University of Alaska Fairbanks. Dunleavy began his career in education as a teacher. He then became a principal and superintendent in northern Alaska.

Before becoming governor, Dunleavy owned an educational consulting firm and worked on several educational projects statewide. He served on the Mat-Su Borough School Board, including two years as board president. Dunleavy was a member of the Alaska State Senate from 2013 to 2018.

ABOUT GOVERNOR ASA HUTCHINSON

Asa Hutchinson (R) is the 46th governor of Arkansas, serving since 2015. He is a graduate of Bob Jones University and the University of Arkansas law school.

Hutchinson's career in public service began in 1982 when President Ronald Reagan (R) appointed him as U.S. Attorney for the Western District of Arkansas. From 1990 to 1995, he was chairman of the Republican Party of Arkansas. In 1996, he was elected to the first of three terms in the U.S. House of Representatives. He was one of 13 House managers during the impeachment trial of President Bill Clinton (D). President George W. Bush (R) appointed him as director of the Drug Enforcement Administration and then as an undersecretary in the Department of Homeland Security.

ABOUT GOVERNOR BRIAN KEMP

Brian Kemp (R) is the 83rd governor of Georgia, serving since 2019. He graduated from the University of Georgia with a degree in architecture. Before entering politics, Kemp founded Kemp Development and Construction Company, and later invested in banking, farming, timber and manufacturing companies. He also sat on the boards of Suncrest Stone and St. Mary's Hospital in Athens.

Kemp was first elected as a state senator in 2002 and served for four years. In 2010, he was appointed as secretary of state by Gov. Sonny Perdue (R) following the resignation of Karen Handel (R). He won a full term that same year and was re-elected in 2014.

ABOUT GOVERNOR BRAD LITTLE

Brad Little (R) is the 33rd governor of Idaho, serving since 2019. He graduated from the University of Idaho with a bachelor's degree in agribusiness.

Little managed his family's ranching company, Little Land and Livestock, for nearly 30 years. He was a member of the Idaho Association of Commerce and Industry for 20 years and served as its chairman.

Little also served in various leadership roles in ranching, education and banking organizations.

Governor Dirk Kempthorne (R) appointed Little to fill a state Senate vacancy in 2001. He served in the Senate until Gov. Butch Otter (R) appointed him as lieutenant governor in 2009, a position he held until 2019.

ABOUT GOVERNOR GRETCHEN WHITMER

Gretchen Whitmer (D) is the 49th governor of Michigan, serving since 2019. She received a bachelor's degree and Juris Doctor from Michigan State University. She worked as an associate attorney for Dickinson Wright PLLC before being elected to the state legislature.

Whitmer began her public service career after winning the election to the Michigan House of Representatives in 2000. She was re-elected in 2002 and 2004. In 2006, she won a special election to the Michigan State Senate. She was elected to a full term that same year and was re-elected in 2010. Whitmer did not run for re-election in 2014 due to term limits. After leaving the legislature, she worked as the Ingham County prosecutor in 2016.

ABOUT GOVERNOR TIM WALZ

Tim Waltz (D) is the 41st governor of Minnesota, serving since 2019. Walz was recruited by Notre Dame to play football but later retired from football and transferred to Chadron State College.

Before his political career, Walz worked as a teacher. He taught at the Pine Ridge Indian Reservation in South Dakota and with WorldTeach in China. He also served for 24 years in the Army National Guard and is a veteran of Operation Enduring Freedom. After retiring from military service, he returned to teaching and football coaching at Mankato West High School.

Walz's public service career began as a U.S. Representative for Minnesota's 1st Congressional District from 2007 to 2019.

ABOUT GOVERNOR GREG GIANFORTE

Greg Gianforte (R) is the 25th governor of Montana, serving since 2021. He received a bachelor's degree and a master's degree from the Stevens Institute of Technology.

Before entering politics, Gianforte worked as an engineer and business owner. He and his wife, Susan, founded RightNow Technologies, a customer relationship management software company, in 1997. He also worked on job development in Montana through the Better Montana Jobs project and a scholarship program for low-income students and veterans to receive training and work in the state.

Gianforte first entered politics by running in the 2017 special election for Montana's at-large district in the U.S. House of Representatives, vacated by then-Interior Secretary Ryan Zinke. Gianforte held that seat until 2021.

ABOUT GOVERNOR ROY COOPER

Roy Cooper (D) is the 75th governor of North Carolina, serving since 2017. He graduated from the University of North Carolina at Chapel Hill and received his Juris Doctor from the University of North Carolina School of Law.

Cooper began working at his family's law practice, Fields & Cooper, as an attorney specializing in civil suits, personal injury cases, and insurance defense. He was elected to the North Carolina House of Representatives in 1986. He was later appointed to serve in the state senate and, in 1997, was elected majority leader.

Cooper then ran for attorney general in 2000 and served in that role until 2017.

ABOUT GOVERNOR RALPH NORTHAM

Ralph Northam (D) is the 73rd governor of Virginia, serving since 2018. He received an undergraduate degree from the Virginia Military Institute and a medical degree from Eastern Virginia Medical School. Northam began his career with the United States Army as a medical officer.

Northam returned to Virginia after his military service. He practiced pediatric neurology in Norfolk before founding Children's Specialty Group, a pediatric private practice. During this time, Northam also taught neurology as an assistant professor at Eastern Virginia Medical School.

Northam entered politics when he became a member of the Virginia State Senate from 2008 to 2014. He served as lieutenant governor from 2014 to 2018 under Gov. Terry McAuliffe (D).

ABOUT GOVERNOR JAY INSLEE

Jay Inslee (D) is the 23rd governor of Washington, serving since 2013. He received a bachelor's degree in economics from the University of Washington and a law degree from Willamette University.

Following law school, Inslee worked in Selah, Washington, as an attorney with Peters, Schmalz, Leadon & Fowler. He also worked as a municipal prosecutor from 1976 to 1984.

Inslee entered politics in 1982 following his election to the Washington House of Representatives. He was elected to represent Washington's 4th Congressional District in 1992 and lost his bid for re-election. In 1998, President Bill Clinton (D) appointed Inslee as a regional director for the U.S. Department of Health and Human Services, a position he held until 1998. Inslee then represented Washington's 1st Congressional District until 2012.

ABOUT GOVERNOR JIM JUSTICE

Jim Justice (R) is the 36th governor of West Virginia, serving since 2017. He received an undergraduate degree and an M.B.A. from Marshall University.

Justice started Justice Family Farms in 1977 and expanded the business to cover 50,000 acres in West Virginia and neighboring states. Justice assumed control of Bluestone Industries, Inc. and Bluestone Coal Corp. following his father's death in 1993. He sold his interests in the Bluestone companies in 2009 and purchased a controlling interest again in early 2015. Justice serves as owner or chief executive officer of over 50 companies, including the Greenbrier Resort. He also owns 70 active mines in 5 states.

Justice was elected governor in 2016 as a Democrat and switched parties in 2017.
